AB- <NV> NOVELTY - The prior **prices** of an item are analyzed to determine the predictable change patterns. The current price of the item that is subject to change in future, is automatically predicted from the patterns. The acceptance of the current price is determined based on prediction result.|

AB- <BASIC> DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for computer readable medium storing predictive **pricing** program.

USE - For using predictive **pricing** for item e.g. airline ticket, car rental, hotel rental, food product, vacation package, cruise, gasoline, jewelry, consumer electronic book, compact disk (CD), digital video disk (DVD), video tape, software, apparel, toy, game, vehicle, event ticket, furniture, and other services, using computer.

ADVANTAGE - The evaluation of buying and selling decisions of the items, is assisted reliably, based on the **historical pricing information** of the item. Thus, sales promotion is achieved.

DESCRIPTION OF DRAWING(S) - The figure shows a block diagram of the computer system for predictive **pricing**.

Two rising stars of the enterprise software business explain why their markets are still hot despite Wall Street jitters

Brandt, Richard L; Lenatti, Chuck

Upside v11n1 PP: 102-122 Jan 1999

ISSN: 1052-0341 JRNL CODE: UPS

WORD COUNT: 7091

...TEXT: Baan announced disappointing earnings. Wall Street analysts and investors became nervous, and ERP company share **prices** dropped significantly. Although Siebel's ERM business was still strong-for the nine months ended We spent a great deal of time with these organizations to understand their **information** requirements [regarding] **sales** and customer service systems, for the second half of this decade and for the next...expect you to go next? We can see expanding this into reaching customers over the **Internet** -electronic commerce. We can see extensions into software- **agent** technology, virtual **buying agents**, virtual selling **agents**. We can see extension into database marketing. We'll see many extensions to the marketing...does. The most important trend is disintermediation. And this is where we're using software- **agent** technology-virtual **buying agents** and virtual selling **agents** -to represent us as consumers and as sellers on the **Internet**. Much of the activity we engage in ourselves, whether it's the product search or ultimately the price negotiation, will be conducted by **buying agents** and selling **agents** in the future. Software- **agent** technology is a core enabling technology [that will] enable electronic commerce on the **Internet** in a big way. And this is a major emphasis at Siebel Systems.

Agent technology...

...Captioned as: Siebel Systems Inc.

Privacy issues on the Internet are becoming increasingly important. Collecting **information** about buying **patterns** on the Web is incredibly valuable to corporate sales folks. But the government or consumers...

...TEXT: energy demand; however, it began to crumble in 1973 with the first oil shock. Energy **prices** shot up, becoming a significant item on the bills of consumers and businesses. Utilities, saddled...to use strategies such as bringing utilities under municipal supervision to procure the cheapest power **prices**. This example is not an isolated instance. Consumers are experiencing growing pressure to cut their...

...or declining. With less disposable income, residential consumers are no longer willing to pay high **prices** to their local utilities if they can get cheaper power elsewhere. Cambridge Energy Research Associates...to entry were lowered or eliminated, markets were increasingly segmented, new distribution channels were created, **prices** were reduced, **pricing** mechanisms were more complex and diverse, and new products and services proliferated.²¹
In this...

...they are, rather, estimates of the magnitude of changes that the electricity industry must confront.

Prices

It is widely held that the restructuring under way in the U.S. electric utility industry will cause the unbundling of electricity **prices**. Competition and consolidation could result in a 40 percent decrease in the average wholesale price...

...be vicious and show little restraint.²⁵ In the U.S. airline industry, average ticket **prices** have declined steadily since 1978,²⁶ and the industry hasn't posted operating margins (before...

...as much money as it had made since its inception in 1914. While such predatory **pricing** has not yet become rampant in the electric utility industry, there have already been numerous...example, meters in most U.S. homes are read only once a month. Real-time **pricing** of residential electricity would require gathering, processing, and distributing this data every minute, which can...

...information and its processing will be priced and sold separately.

While these five directional markers - **prices**, contracts, new products and services, global scope, and information intensity - are not exhaustive parameters for...

...on its books and currently recoverable through rates. However, in an open market, current high **prices** would fall and the costs driving those price premiums would become "stranded" or unrecoverable to...Exchange. Electricity would be auctioned on the power exchange, where the lowest bid and asked **prices** would be matched. The independent system operator, which is not controlled by the utilities, would...on a potential gold mine of data. Everything from customer usage information to specific appliance **information** and usage **history** is valuable. We believe that electric utilities will be able to sell such appliance data...exchange. Electricity would be auctioned on the power exchange, where the lowest bid and asked

prices would be matched. The independent system operator would then schedule and dispatch that power to...for customers of all sizes to construct their own value networks. Once data sources for **pricing** and supply information are widely available, intelligent **agents** over the **Internet** will provide customers direct access to the **purchase** and transmission of power. Customers will be able to contract directly for their energy requirements...

...Power marketing and information-based segments will be dramatically different, with limited hard assets and **pricing** based on value rather than cost.

For companies seeking to compete as virtual utilities, nothing...margin, the cost is that of a combustion gas turbine. As this reviewer further noted, **prices** may fall even in the absence of restructuring due to the ending of a large...

- * Updates **purchase** contract activity and any deviations from the sourcing plan.

- * Maintains performance information on suppliers.

- * Electronically...one or two buyers or procurement specialists to handle the purely business side of sourcing.

Pricing and availability are key issues in DRAMs, says Andy Winterbottom, procurement manager for DRAMs. "DRAM **prices** are different in every region of the world. Sometimes it's a juggling act, balancing price against the need to satisfy local content requirements."

"DRAM **prices** vary from region to region even if you buy them from the same supplier," adds Bowden. "Surprisingly, the best DRAM **prices** often can be found in Singapore, though no one makes DRAMs in that country."

The-latest **pricing** information is constantly being fed to the corporate team from HPs international procurement offices (IPOs) around the world. Every month the **prices** quoted on RFQs are fine-tuned. "DRAM **prices** are nearly always coming down," says Bowden. Purchasing also measures total DRAM capacity against market demand to see if **pricing** will continue to weaken. Each quarter, the group reviews its worldwide buying strategy. One thing...issues in HP's sourcing strategy. During the '80s, it worked at setting up a **network** of international procurement offices (IPOs) manned by local **agents** familiar with the customs of the region. Acting as the "eyes and ears" of **purchasing**, these **agents** provided the latest scoop on potential new sources. And unlike manufacturing reps, they work exclusively...long-range materials requirements planning.

There are also enormous pressures to reduce materials costs. Retail **prices** for ink-jet printers have fallen about 40% over the past four years, or to...more emphasis on administrative quality.

- * Responsiveness: More schedule flexibility.

- * Delivery: Shorter leadtimes.

- * Cost: Zero-base **pricing**.

The '90s also appear to be shaping up as the decade where environmental issues will...

... integrated into the systems within six months). In addition, the system supports a universal bracket **pricing** structure that consolidates the volumes of all Nabisco products ordered.

This approach is an outgrowth...

...service disruptions.

"A lot of cooperation and significant effort had to take place among our **information** systems people, **sales** management, manufacturing, marketing, finance, and logistics to bring it all together, and make it transparent...

...invoicing system and the advantage of grouping all Nabisco products purchased into one of five **pricing** brackets, based on quantity ordered.

"Now customers can purchase at a lower unit cost," Andraski said, adding, "no matter who the customer is--this is a generic **pricing** structure that fits Nabisco's fair and equitable **pricing** structure."

Andraski said the consolidated order and delivery system is also designed to cut down on invoice inaccuracies.

To that end, Nabisco has created an on-line system for its **brokers** that allows them to compare the customer's **purchase order** to the **order** in Nabisco's system.

"Every month a system-generated report card is provided to each **broker**. It tells them how well they did with the accuracy of their **orders**

--within the confines of what the **broker** controls," Andraski said. "We're now able to measure invoice accuracy, and we feel very..."

RECORD TYPE: FULLTEXT

WORD COUNT: 12887 LINE COUNT: 01070

... institutional concerns, such as price information, the matching of buyers and sellers, and optimal dealer **pricing** policies. Despite the substantial literature on microstructure, little attention has been paid to the particular...

...name suggests, "make a market" in one or more currencies by providing bid and ask **prices** upon demand. A broker arranges trades by keeping a "book" of market-maker's limit...p.sub.t/[I.sub.t-1]]. In other words, the joint distribution over future **prices**, [f.sub.m(p.sub.t)], assessed by the monolithic market (or a representative agent...

...More fundamentally, positing a "true" distribution confuses the chain of causality; it presumes that future **prices** are drawn from some exogenous probability distribution and that investor behavior is concerned with accurately estimating that distribution.

In fact, investor behavior in the marketplace determines the distribution of future **prices**, not the other way around. This fact in no way depends on the ultimate basis...

...theory of efficient markets is ill-suited to the modeling of price discovery. In comparing observed **prices** to an imputed "true" distribution, studies of market efficiency ignore more immediate concerns - for example...

...fundamental lessons of the microstructure literature is that institutional differences can affect the efficiency of **pricing** and allocation.

As described above, the foreign exchange market combines two disparate auction structures for...are explained below.

Centralization

In a centralized market, "trades are carried out at publicly announced **prices** and all traders have access to the same trading opportunities." In a decentralized market, in contrast, "**prices** are quoted and transactions are concluded in private meetings among agents."(13) A New York...

...of brokers in the foreign exchange market violates this simple taxonomy, however. Each foreign exchange **broker** accumulates a subset of market-makers' limit **orders**. This **network** of "brokerage nodes" is as different from a fully centralized system as it is from...

...markets. In a Walrasian tatonnement model, for example, an auctioneer calls out a series of **prices** and receives buy and sell orders at each price. When a price is found for...

...earlier transactions satisfy some consumers and producers, causing shifts in supply and demand that affect **prices** for later transactions. As a result, the Pareto-efficiency characteristic of Walrasian equilibria does not...

...premium - for the ability to trade immediately. Similarly, periodic calls delay any information conveyed by **prices** until the time of the call, introducing price uncertainty in the period between the calls...

...that the allocational benefits of a call market system are a public good.

Communication of **Prices**

The terms "open-bid" and "limit-book" refer to ways in which price information is...fully centralized suggests that these systems do not represent a cost-minimizing arrangement.

Structure of **Prices**

The terms "double-auction" and "single-auction" refer to the nature of the **prices** quoted. In a double-auction market, certain participants provide **prices** on both sides of the market, that is, both bid and ask **prices**. Participants providing double-auction quotes upon demand are known as market-makers, and they must have sufficient capitalization to back up their quotes. In a single-auction market, **prices** are specified either to buy or to sell, but not both. In the foreign exchange market, market-makers provide double-auction **prices**, while brokers try to aggregate single-auction quotes into two-way (inside) spreads. A broker...

...respectively, a single-auction quote or none at all.

Thus, whether double or single-auction **prices** are quoted depends largely on whether the agent quoting **prices** is providing market-making services or simply attempting to acquire (or sell) the commodity. This...

...for a counterparty. Inversely, decentralization of price information leads to a tendency toward double-auction **prices**, again to facilitate the search for a counterparty. (23)

MODELLING TRADERS' BEHAVIOR

The microstructure literature...

...modeling. An almost universal simplification is to model securities markets in partial equilibrium, so that **prices** are not determined endogeneously in the traditional general equilibrium sense. This allows the modeler to...

...such forces as general equilibrium or recursive beliefs, models posit probability distributions that produce the **prices** of orders in the market. Modelers have included randomness at one or both of two levels, depending on their focus. First, order **prices** can be generated by objective distributions, that is, by stochastic processes exogenous to the market...

...process that generates the "true" equilibrium price. Second, probability models of participants' subjective beliefs about **prices** can be used. Conroy and Winkler, for example, attribute subjective normal price distributions to market-makers, who use Bayesian updating to learn about the **prices** of incoming limit orders. (26) Objective processes can coexist with subjective beliefs about those processes...

...assumptions are explicit; there, independence implies that any sequence of buy orders, regardless of their **prices** and quantities, has no effect on the subjective probability of a sell order at any...

...Cohen, Maier, Schwartz and Whitcomb (1981), for example, assume that actual market bid and ask **prices** are independent Poisson processes and give investors joint subjective distributions over those **prices**. For the latter distributions, probabilistic independence of bid and ask **prices** is not explicitly required. Black (1989) models quantities (independent of **prices**) of market orders. Quantities supplied and demanded are drawn from different distributions, but the distributions...

...not independent.

The most common alternative to separate purchase and sale processes is to model **prices** as some function of a single scalar process. This approach is in the spirit of...

...the stock to be exogenously determined by this information set and ask how the dealer **prices** relative to his "true price..."

This subjectivization of the **pricing** process is significant, because it allows for heterogeneous expectations and thus for more realistic modeling...

...identical. Furthermore, it is well known that "taking a view," that is, speculating on future **prices**, is routine for many participants. (32) To omit this heterogeneity from a model is to...too inexact in a microstructural context. One must often distinguish at a minimum between quoted **prices**, transaction **prices** and equilibrium **prices**. There are also reservation **prices**, market-clearing **prices** and closing **prices** (see Schwartz (1988), chapter 9, for the distinction between equilibrium and clearing **prices**). If unspecified here, the intended definition should be clear from the context. (25) The alternative...

...1983), p. 29, or Burnham (1991), p. 139. (33) See Burnham (1991), p. 136.

Bayesian Learning of Price Information

Conroy and Winkler (1981) developed a Bayesian model of market-maker price expectations, which is...

...orders are for a single round lot. Assume that the market-maker believes that reservation **prices** of buy orders, $[P_{sub.d}]$, are generated by a normal distribution, $[F_{sub.d}]([P_{sub.d}:\mu_{sub.d}], [\sigma_{sub.d}])$; reservation **prices** of sell orders, $[P_{sub.s}]$, are generated by a second, independent, normal distribution, $[F_{sub.s}]$.

...information. The market-maker is assumed to behave in a Bayesian fashion, using the observed **prices** on incoming limit orders to refine the parameters of his subjective distributions. For example, assume that the market-maker views purchase **prices** as coming from a normal distribution [Mathematical Expression Omitted] but is unsure about the mean...

...values for the mean, $[\mu_{sub.d}]$. Given this, the marginal subjective density over the **prices** of incoming limit orders, $[f_{sub.d}]([p_{sub.d}]) =$ [Mathematical Expression Omitted] is normal...

...which does not specify a price. They do not incorporate the impact of inventory on **pricing**, nor do they generalized beyond the unrealistic assumption of normally distributed **prices**. (2) This is depicted in the figure above, where price is on the horizontal axis...imperative of arbitrage avoidance must be regarded as the first priority in individual market-maker **pricing**, to which all other factors (e.g., purchasing power parity) must be subordinated.

Market-makers...

...to be a direct violation of the law of one price, since it assigns two **prices** to the same commodity. Several explanations have been offered to resolve this seeming inconsistency. They...

...a basis for profitable speculation. Another form of information that can be construed as inside **information** is **knowledge** of an arbitrage opportunity. Consider a hypothetical market in which there are numerous decentralized market-makers who do not quote spreads, but single **prices** at which they are willing both to buy and sell. Unless there were a perfect ...

...ask spread, in contrast, allows a market-maker to include an error tolerance in her **prices**, thus facilitating a price consensus: it is easier to get bid-ask spreads to overlap than to get scalar **prices** to coincide. The spread also provides the market-maker with some degree of protection from...1981) resolve this problem. They conclude that a market-maker, optimizing his bid and ask **prices** over time in the face of a stochastic order flow, will shift both bid and...

...discussion of the bid-ask spread has focused on models in which bid and ask **prices** are set by individual market-makers. The dual role of the stock exchange specialist suggests...

...Whitcomb (1979) note that inadequate attention has been given to the fact that not all **prices** are market-maker spreads. The market often makes

itself without specialist assistance, through the aggregation...exchange market and its participants. Market-makers are the crucial element: they provide all transaction **prices** in the market and are involved in at least one side of every deal. The microstructure literature has developed numerous models of the interpretation and setting of **prices** by traders. The diversity of expectations models used in the literature illustrates the importance of...

...the spread provides flexibility elsewhere. Just as arbitrage avoidance is concerned with accurately estimating current **prices**, speculation is concerned with estimating future **prices**. By changing in size and shifting up or down, the spread can control stochastically the...

...the specialist should maintain a continuous market with price continuity and close bid and asked **prices**, and minimize the effect of temporary disparity between public supply and demand." See Leffler and...a Dealership Market," Financial Analysts Journal (May/June 1982), pp. 50-59.

...ABSTRACT: choosing tools, Excel worksheets, Excel navigation macros, collecting quotes, daily updates, updating the Excel worksheets, **buying** and selling stocks, recording transactions, and completing a transaction. In addition, Windows **Broker** will also automate the **buying** and selling process through an **online** discount brokerage.

... and presenting stock price and portfolio data; 2) Excel macros to automate the presentation of **prices** and portfolio data; and 3) Dynacomm scripts and Excel macros to get current **prices** and to purchase and sell stocks.

Excel Worksheets

The first stage was the easiest. We...

...were as follows:

Date High Low Close Volume

We then entered about 60 days of **historical** price **data** that we had previously downloaded from CompuServe into both worksheets, putting each day's data...

...you to draw a text box directly on the worksheet. The "Lotus," "IBM," and "Update **Prices**" buttons were created with Excel's button tool, which allows you to draw 3-D...

...on a worksheet. The opening screen's price chart, which graphs changes in the closing **prices** of Lotus and IBM stock over the past 60 days for which **prices** were recorded, is linked to the LOTS.XLS and IBM.XLS files. In each of those files, we created a named range called Last60Close, containing the relevant **prices**. The two lines in the Price Per Share chart simply point to the Last60Close ranges...

...screen.

The Last 21 Days graph is a full-screen chart of high-low-close **prices** for the past 21 days on which price data was recorded. The Price and Volume...together. In the end we had six new Excel macros (named Buy, Sell, Get [underscore] **prices**, Update, Trans, and Cleanup) and three Dynacomm scripts (QUOTES.DCT, BUYSELL.DCT, and UPDATE.DCT...

...for the stocks in our portfolio. This process is initiated when you select the "Update **Prices**" button on the Windows Broker opening screen. Doing so executes the Excel macro named Get [underscore] **prices** (all the Excel macros are contained in the single macro sheet, BROKER.XLM), which launches Dynacomm and executes Dynacomm's QUOTES.DCT script.

The Get [underscore] **prices** macro is very simple:

Get [underscore] **prices**

=INITIATE("Dynacomm","quotes.dct")

=TERMINATE(A43)

=MESSAGE(TRUE,"Connecting to CompuServe")

=RETURN()

Get [underscore] **prices** uses DDE to launch Dynacomm and execute the script QUOTES.DCT, then terminates the DDE...and requests stock-price data for Lotus and IBM.

Once Quick Quotes displays the requested **prices**, QUOTES.DCT collects them with these commands:

collect \$lots

collect \$ibm

These commands assign the current **prices** for Lotus and IBM to the strings \$lots and \$ibm.

Finally, the script logs off...

...IBM.XLS sheets, and updates the named ranges in those sheets to reflect the added **prices**.

Ginger R. DeMille

The Cleanup macro selects the newly arrived stock data, which arrives from Dynacomm in the...

...range and one column to the right, the cells that contain the last 21 high **prices**. This range is defined as Last21High, and so on.

Finally, Cleanup closes LOTS.XLS, opens...

Multiplex retailers versus wholesalers A test of the total value of

purchasing model

Lusch, Robert F; Vargo, Stephen L
International Journal of Physical Distribution & Logistics Management
v28n8 PP: 581-598 1998
ISSN: 0960-0035 JRNL CODE: IPD
WORD COUNT: 7233

...TEXT: that affect total value, in addition to the more traditional and narrow concerns for selling **price** .

Positive analyses

This **trend** in purchasing management toward an emphasis on quality and service, in addition to selling price, is partially supported by empirical studies intended to assess evaluation criteria actually employed by organizational **purchasers** . However, relative attribute importance has been noted to vary across buying situations and product categories...

...modified-rebuy situations. However, they also found that post-purchase evaluation and search for potential **suppliers** was very limited in most industrial rebuy situations. Puto et al. (1985) found evidence of...

...barrier" in industrial buying. Specifically, they found that in a modified-rebuy situation, the current **supplier** was more likely to be selected even when an alternative **supplier** offered less risk (e.g. a guarantee). That is, **supplier** loyalty seemed to mediate risk taking.

Several researchers have noted differential relative attribute importance as...

...product classes.

Wilson (1994) in comparing a review of past studies concerning relative product and **supplier** attributes with a current survey of buying center members, suggests that there has been a...

...important element in this equation. A purchased product's total cost is made up of **initial price** , various direct and indirect costs associated with product quality, and a similar array of costs...

...service required to support acquisition and use of the product. It is not surprising that **purchasers** who strive to minimize total cost **place** greater emphasis on quality and service and less emphasis on price."

Most of the empirical...

...TEXT: development toolS.78

For these reasons, it is not surprising that, in real terms, software **prices** generally **trend** down. In fact, many software products' **prices** actually **trend** down in nominal terms.⁷⁹ To induce installed base **users** to incur the switching costs of an upgrade, **vendors** often combine product enhancements while preserving or reducing prices. Piracy is another factor that puts...

...of price. Lower market prices reduce somewhat the incentive to pirate.

VII. Performance

The downward **trend** in PC software **prices** is a positive market performance indicator. Unfortunately, there is no published source of pricing data...

...cycles, multiple distribution channels, and bundling are preeminent factors.

It is possible to examine the **trend** in **prices** for particular products, however. Table 6 exhibits the retail "street" price of successive versions of...

...1990 and 1998. These prices were those advertised by PC Connection, a large software discount **retailer**; each price is the **first price** advertised by PC Connection (on its Web **site** or in PC Magazine) after new products were introduced. From 1990 until 1995 (and the advent of Windows 95), a **user** of Windows required a version of DOS to run underneath Windows. The only retail sales...

...95 added plug and play connectivity, built in TCP/IP networking support, and an improved **user** interface. Windows 98 includes Web browser capability and can support multiple monitors. Controlling for these improvements and other additions that **users** value would mean the real price of Windows fell even more than table 6 suggests. Applications software is not immune to the downward **trend** in **prices** either. Gandel estimated hedonic price equations for PC spreadsheets sold during the years 1986-1991...

...TEXT: Speculation

BECAUSE THE FUTURE IS UNCERTAIN, speculators often fail to anticipate correctly the peak and **subsequent** decline in **prices**. Speculation can thus also increase the amplitude of price oscillations. As noted by Joan Robinson...

...the influence of the expert professional speculators alone." Camp followers often lose money, being noise **traders** blindly following the more-informed professionals. But even the professionals can become overconfident.

Speculative demand can thus drive the price higher than that set by the **users** all the way up to the peak, increasing the peak price substantially. This is even...

...as land whose quantity cannot be expanded. After a peak, when the price falls, speculative **sellers** can drive the price to a trough below that which would have taken **place** in the absence of speculation. Smelser (1963, p. 215) notes that "When speculation is rampant, the turning-point is sharper." When actual **users** reduce buying because the price is too high, and investors whose intention is to profit from actual **user** demand and from productivity suspect that the gains are instead coming from speculation, the reduction...anticipated demand. Incorrect anticipation has a negative effect in making the price higher for actual **users** (and reducing the profits of enterprises using the input) when the reduction in quantity occurs...

Conditional price trends in the aftermarket for initial public offerings
Affleck-Graves, John; Hegde, Shantaram; Miller, Robert E
Financial Management v25n4 PP: 25-40 Winter 1996
ISSN: 0046-3892 JRNL CODE: FMG
WORD COUNT: 8380

...TEXT: our results in Section V. The paper closes with a brief summary and conclusion.

I. **Trends** in Stock **Prices**

Evidence of significant **trends** in stock returns is receiving increasing attention in the finance literature. Early examples of such...turn out to be underpriced with those that are overpriced.

Only Miller and Reilly (1987) **separate** the performance of initially underpriced and overpriced IPOs. They find that over the first 20...

...The price formation process for IPOs may be susceptible to the existence of significant conditional **price trends** in the short-run aftermarket for several reasons. First, there exists a growing body of...

...extremely difficult. Consequently, the initial return on an IPO (i.e., the difference between the **first** market **price** and the offer price) reveals significant information because it provides the first public indication that...

...signaling theories (see Allen and Faulhaber, 1989; Grinblatt and Hwang, 1989; and Welch, 1989) the **initial** market **price** provides a signal of the quality of the IPO.

Second, the **first** market **price** may fail to reflect fully all available information because of the potentially fragmented market for...

...typically small and the underwriters, often facing excess demand, ration new issues to their regular **clients**, who constitute a small subset of potential investors. Initial trading in the aftermarket serves to disseminate information about the value of IPOs to other investors. While **initial** upward **price** movement of underpriced IPOs spreads favorable information, the available supply of shares is restricted because...

...in a sequence of daily positive returns. In the case of an overpriced issue, the **first** market **price** fails to reflect the available information because of price stabilization by the underwriting syndicate. As the syndicates disband at varying times for the **different** IPOs, this leads to gradual downward price adjustment on average and sequential negative daily average...

...Such effects, however, may be offset by incentives provided by the syndicate to induce informed **traders** to reveal their private information while the offering price is being set. For example, in Benveniste and Spindt (1989) and Benveniste and Wilhelm (1990) informed **traders** have an incentive to understate their interest in a new issue in the premarket, but ...

...new issues by underwriters and of informationally fragmented markets for IPOs may lead to conditional **price trends** in the short-run aftermarket for IPOs.

II. Data and Research Method

Our sample consists...

...1975-1991 period. Issue characteristics were obtained from Going Public: The IPO Reporter and the Investment **Dealers** Digest, and price information was collected from the Center for Research in Security Prices (CRSP)

Shopping around for a juicier contract

Bennell, Peter

Purchasing & Supply Management PP: 16-20 Feb 1996

ISSN: 0309-7242 JRNL CODE: PSU

WORD COUNT: 1533

...TEXT: Contract length

One aspect of the buying process that should form a central theme for **purchasers** is the length of contract. Whilst annual contracts may appear attractive, thanks to the fact...

...each year can be costly in terms of time and resources - particularly for multi-site **purchasers** where recalculations during negotiations can be complex - and with prices already low, savings are becoming increasingly small.

Experience at Eastern has shown that **customers** with 24 or 36 month contracts have generally found better value deals. In a competitive market, **suppliers** cannot offer prices away from the market price and so **purchasers** make the savings they are looking for. But longer contracts also allow a relationship to be built between **customer** and **supplier** which, in turn, can lead to considerable benefits beyond lower prices. When a **supplier** understands the **customer**'s needs, help can often be offered by tailoring the contract precisely or adjusting the consumption pattern. **Suppliers** can also help with questions of contracting and energy efficiency. One **customer** in the food processing business even found that Eastern was able to help with the...

...have been agreed, then both parties have a basis for discussion and understanding of the **subsequent** contract **price** and conditions. Price, naturally, remains of key interest to **purchasers**, but the comparison of various offers can be awkward with figures presented in very **different** formats by the various **suppliers**.

A number of software packages are available, designed to compare offers on a like for...

...Appraise 2000, but the final decision shouldn't be based solely on money. Although, in **one** sense **price** is key, because you are basically buying a commodity, it is also very important to look at the basis on which the **supplier** has put the tender together. Discussion with your **supplier** should reveal the optimum length for your contract and it is worth seeing if services...

...and how frequently? Details such as these can be vital, allowing you, your accountants and **site** managers to make full use of the available information. At Eastern Electricity we are very mindful of the contrasting working, accounting and management cycles of **different** industries.

Some of our customers, often those with a large number of sites, want the ...

Behavior of retail prices: A note on market integration in the U.S.

Pryor, Frederic L

Eastern Economic Journal v21n1 PP: 83-95 Winter 1995

ISSN: 0094-5056 JRNL CODE: EEJ

WORD COUNT: 5695

...TEXT: ISSUES AT STAKE

The key element in testing a dynamic version of the law-of- **one** - **price** is the determination that the share of transportation costs in total costs has declined since...

...rate of 3.2 percent.(1) This was considerably lower than the increase of the **consumer** price index (CPI), and it was also lower than for any

commodity group under consideration in the statistical analysis below, except clothing. Such data on relative **price trends** say nothing, of course, about changes in cost shares. But if we make the reasonable assumption that the price elasticity of transportation expenditures for producers and **retailers** is less than unity, then the share of transportation costs, measured in current prices, should...

...prices across the five large cities used in the sample have changed enough to influence **trends** in **price** variations. Thus, falling transportation costs are the key.

Five reasons can be offered to explain why the dynamic version of the law-of- **one - price** might not apply in the domestic economy at the retail level when comparing average prices...

...across large cities.

Rising Search Costs

The narrowing of price differences across space assumes that **consumers shop** assiduously for the lowest price with little regard to the cost of search. But analysis...

...such a search is relatively inexpensive and the potential savings are great. For instance, some **consumers** wishing to buy a new automobile are willing to search a considerable distance from their...

...unless the good is bought repeatedly. In the course of economic growth, the value of **shoppers** ' time rises since the value of alternative uses of time increases with a rising per capita income. Thus, as per capita income rises we would expect less search by **consumers** , especially for heterogeneous goods. As a result, we would also expect price dispersion over space...

NAVA Patterns 2.0
Anonymous
Futures: The Magazine of Commodities & Options v23n3 PP: 58 Mar 1994
ISSN: 0746-2468 JRNL CODE: CMM

ABSTRACT: If a **trader** wants something **different** in technical analysis,

Nava Development Corp.'s Patterns could be worth a look. Patterns takes a unique approach by identifying recurring bar chart **patterns** that indicate future **price** direction. The **patterns** can be detected in either the standard bar chart format or with recently popularized candlestick charts. The program first is used to research **price patterns**, finding those consistently followed by up or down price moves. As the **user** discovers these patterns, they are stored in a library. This library is then scanned on...

...daily basis to see if the current bar chart formation matches any of the stored **price patterns**. Installation of the Patterns program is routine. The program does not use any esoteric mathematical...

...to determine pattern matching. Instead numerous Pattern-IDs are used that define the relationship of **one price** to another.

...TEXT: from other localities and manifesting the 'tour operator syndrome', of which the symptoms are angry **customers** finding out that the **person** sitting next to them on the plane has paid only half the price for the same holiday.

What mechanism prevents the Cosy-glow Cornflake Company from selling at **one price** to Tesbury and another to Sainco? There are no rules issued by a National Grocery Service, but supermarket giants may, for example, insist in their contract that the **supplier** undertakes not to sell to anyone else at a lower price, including any quantity rebates. The **supplier** can decline if he wishes! There is nevertheless scope for ingenious **suppliers** to reward the **customer** for more business by assistance with promotions, staff training, undertaking to deliver in the middle of the night... The conventional deterrent is that a **customer** who learns that another **customer** has been charged lower prices will, at the **next price** negotiation, hurl the evidence in the teeth of the **supplier** and insist on equal treatment plus compensation for past overcharges. The outcome will depend on who uses most leverage.

A crafty ruse used by **retailers** selling, say, dishwashers and claiming never to be beaten on price is to arrange that their supplies of a branded machine are labelled with a slightly **different** model number so that they can claim non-equivalence. More honest, perhaps, is a hotel selling at **different** rates to two tour operators, providing 'free' wine to **clients** covered by the higher-price contract: the higher specification does not have to be pro...

...enough to reduce their revenue costs in capital or other areas is passed directly to **purchasers** who will use it to purchase better quality and a greater quantity of healthcare rather...

... our results in Section V. The paper closes with a brief summary and conclusion.

I. Trends In Stock Prices

Evidence of significant **trends** in stock returns is receiving increasing attention in the finance literature. Early examples of such... turn out to be underpriced with those that are overpriced.

Only Miller and Reilly (1987) **separate** the performance of initially underpriced and overpriced IPOs. They find that over the first 20...

...The price formation process for IPOs may be susceptible to the existence of significant conditional **price trends** in the short-run aftermarket for several reasons. First, there exists a growing body of...

...extremely difficult. Consequently, the initial return on an IPO (i.e., the difference between the **first market price** and the offer price) reveals significant information because it provides the first public indication that...

...signaling theories (see Allen and Faulhaber, 1989; Grinblatt and Hwang, 1989; and Welch, 1989) the **initial market price** provides a signal of the quality of the IPO.

Second, the **first market price** may fail to reflect fully all available information because of the potentially fragmented market for...

...typically small and the underwriters, often facing excess demand, ration

new issues to their regular **clients**, who constitute a small subset of potential investors. Initial trading in the aftermarket serves to disseminate information about the value of IPOs to other investors. While **initial** upward **price** movement of underpriced IPOs spreads favorable information, the available supply of shares is restricted because...

...in a sequence of daily positive returns, in the case of an overpriced issue, the **first** market **price** fails to reflect the available information because of price stabilization by the underwriting syndicate. As the syndicates disband at varying times for the **different** IPOs, this leads to gradual downward price adjustment on average and sequential negative daily average...

...Such effects, however, may be offset by incentives provided by the syndicate to induce informed **traders** to reveal their private information while the offering price is being set. For example, in Benveniste and Spindt (1989) and Benveniste and Wilhelm (1990) informed **traders** have an incentive to understate their interest in a new issue in the premarket, but ...

...new issues by underwriters and of informationally fragmented markets for IPOs may lead to conditional **price trends** in the short-run aftermarket for IPOs.

II. Data and Research Method
Our sample consists...

...1991 period. Issue characteristics were obtained from Going Public: The IPO Reporter and the Investment **Dealers** Digest, and price information was collected from the Center for Research in Security Prices (CRSP...

... Price Premiums--Search Products. For products with search attributes price premiums can exist only if **buyers** do not expend the effort necessary to examine quality prior to purchase. When **buyers** ' search costs vary, some sellers will sell at prices commensurate with delivered quality, while others can take advantage of the ignorance of some **consumers** and charge a high price that may include a price premium (Tellis and Wernerfelt 1987...

...due to incomplete search.

A critical factor that drives the presence of price premiums is **buyers** ' desire for quality. The **buyer** of a product receives some utility or benefit from each unit of the product purchased. This utility is influenced by the quality of the product as well as the **buyers** ' quality consciousness or desire for quality (Shapiro 1983). In other words, **buyers** who are concerned about product quality are likely to have a higher utility for quality products than **buyers** who are unconcerned about quality. Since quality-conscious **buyers** have a higher utility for quality products, they will have more incentive to search for information about the product's quality. Because **buyers** can successfully engage in a greater amount of search for products with search attributes, quality-conscious **buyers** will be able to discern the actual level of attributes present in a product and...

...out that a price higher than justified by attribute levels is being

charged, quality-conscious **buyers** will tend not to buy. Conversely, **buyers** who are relatively less quality conscious will likely not search as much for attribute information...

...price being charged is excessive, relative to product quality. Thus, for search products, such uninformed **buyers** may pay a price premium. Consistent with this thinking, Tellis and Wernerfelt (1987) observe that "the equilibrium correlation between price and quality increases with the number of informed **consumers** in the market". Thus, the greater the amount of search **buyers** engage in, the less likely it is that opportunistic sellers can extract price premiums. This argument suggests the following hypothesis:

H1: For products with search attributes, **buyers** ' tendency to offer price premiums will decrease with their quality consciousness.

For experience products, the prevalence of price premiums is not a consequence of uninformed **buyers** allowing **sellers** to charge them a price premium. Rather, as we argue **next** , **price** premiums reflect a fee that **buyers** pay to insure **seller** honesty.

Intuition for Price Premiums--Experience Products. If the products are predominantly composed of attributes...

...be assessed only after purchase and use (i.e., experience products |Nelson 1970

), then the **buyer** will be unable to assess the product's quality prior to purchase (e.g., durability...

...an automobile). Though willing to pay a high price for high quality, the quality-conscious **buyer** realizes that, unless repeat purchases exist, **sellers** ' claims of high quality with an accompanying high price are not necessarily credible; the **seller** could simply provide low quality while charging the high price (i.e., the **seller** would cheat).(3)

To overcome this problem, the **buyer** has numerous options. On the one hand, legal contracts and performance bonds can be required. When such mechanisms cannot be easily put in **place** , the **buyer** may pay the **seller** a monetary incentive that provides more than adequate compensation (price premium) for the added cost...

...a continued source of such an incentive (i.e., repeat purchases), as long as the **seller** is not discovered to have compromised on quality (Klein and Leffler 1981; Rubin 1990; Shapiro...

...in our stylized fact regarding the Indian housewife purchasing milk.) When offered this price premium, **sellers** have two options. They can cheat, earn the additional profit represented by (1) the price...

...will accrue from providing low quality, and suffer the loss of future income from the **buyer** who will likely be disenchanted with such dishonest **sellers** . Alternatively, **sellers** may not cheat and may consequently receive a stream of price premium payments from future transactions. The **seller** must be persuaded that the present value of profits accruing from the price premiums from...

...premiums granted over numerous future time periods must be greater than the profit available from **one** large **price** premium payment today. Thus, a price premium can be viewed as a fee to assure honesty that compensates the **seller** for the opportunity cost of not cheating, and the repeat purchase potential assures **sellers** of a stream of future income that is higher than the profit that they would...

... the results.

I. Pricing Underwriter Services

A. Background: Pricing with Setup Costs

In many markets, **buyers** and **sellers** invest in durable transactor or relationship-specific assets. Williamson (1979) defines a durable transactor-specific...

...asset that is required for the transaction but not marketable or transferable to transactions involving **different** parties. Examples of transactor-specific assets include firm-specific training in labor markets and firm...

...relationship with a bank. In such markets, if transactions are expected to recur, then the **buyer** (or **seller**) realizes that selecting a particular **supplier** creates bilateral monopoly power. In particular, the existence of a transactor-specific asset creates a "lock in" effect by making it costly to switch **suppliers**. Therefore, even if the market is perfectly competitive ex ante, once the relationship is established...

...and Alchian (1978), Farrell and Shapiro (1989), and DeAngelo (1981)). In particular, when the incumbent **supplier** can earn quasi rents arising from the switching costs, competition among potential **suppliers** at the initial award stage results in discounting, i.e., setting the **initial price** below marginal cost by the present value of the costs of switching.

The nature of...

...be useful in underwriting subsequent offerings.(1) The investment banker may also identify an informed **client** base for the firm's stock which is also a durable transactor-specific asset (see...

...are important differences that may affect the pricing of underwriter services.(2) For example, a **seller**'s willingness to discount the **initial price** when there are setup costs is based on the expectation that quasi rents will be...

...will be to switch underwriters. Therefore, the less likely a firm is to make a **subsequent offer** and the longer the expected time until a subsequent issue, the less important will be...

**Don't Like That Price? Wait Another Hour 'Til the Deal Gets Even Better
During OutletZoo.com's Twelve-Day Holiday Price Drop Event**

BUSINESS WIRE

December 06, 1999

JOURNAL CODE: WBWE LANGUAGE: English RECORD TYPE: FULLTEXT

WORD COUNT: 793

(USE FORMAT 7 OR 9 FOR FULLTEXT)

OutletZoo.com's Automatic Price Drop goes into overdrive,
giving **shoppers** great deals for the holidays

It's holiday crunch time again. Online and brick-and-mortar stores
alike are sprinting to grab **customers** with the usual free gift-wrapping,
discounted shipping and "percent-off" deals. But what if...

...ten percent on an hourly basis, meaning even bigger holiday bargains and
more excitement for **shoppers**, who can opt to buy at that hour's price or
wait until the price...

... On a normal day, OutletZoo.com's signature Automatic Price Drop(TM)
(APD) system allows **consumers** to get the best prices on already
bargain-priced merchandise such as toasters, computers, crystal stemware,
jewelry and CD players. Each item listed for sale on the Web **site** has a
pre-set schedule of markdowns; prices drop by a **seller**-determined
percentage every price period--sometimes two days, sometimes a week,
sometimes 14 days--until...

... Countdown" event, the APD will go into overdrive; prices on goods from
each of the **site**'s "Zoos," or product categories, will drop by either
five or ten percent hourly. **Shoppers** can expect to find deals on goods
ranging from power saws to cookware to dolls...

...December 8

The fun begins at noon on Wednesday, December 8. Visitors to the Web
site will click through a special "Twelve Days" icon to view the
specially priced merchandise. New...

...hourly between noon and five p.m. EST on each of the 12 days, so
consumers can keep watching OutletZoo.com to find bargains for everyone
on their Christmas list!

An example of the bargains **shoppers** can expect: a Towle stainless
steel flatware set will be one of the first items...

... This elegant flatware set retails for \$125, but it will debut on
OutletZoo at a **starting price** of only \$52.50. After five hours, bargain
hunters will be able to purchase it at 72 percent off what they would have
paid in a retail store! **Shoppers** can opt to purchase the item at any time
or continue to wait for the **next price** drop--and risk having their
coveted item snapped up by some other smart **shopper**!

"Our Christmas Countdown is unlike any other online event this holiday
season," said Ed Samp, CEO and Head Zookeeper at OutletZoo.com. "While
other shopping **sites** are offering the usual incentives like free
shipping, free gift wrapping, or \$10 off purchases, only OutletZoo.com will
have hourly price drops on already-bargain-basement deals."

OutletZoo.com **shopper** Donna Hornby will be among the holiday
bargain-hunters combing OutletZoo.com's listings for...

...OutletZoo.Com

Founded in Cambridge, Mass. in April 1999, OutletZoo.com is
revolutionizing the way **consumer** products are bought and sold on the

Internet. The online bargain hunter's paradise, OutletZoo...

... Drop(TM) system, offering periodic price drops for each of the items listed on the **site**. OutletZoo.com allows **sellers** of excess **consumer** goods to reach a global market of **buyers** interested in wholesale or retail deals, and allows them to quickly deplete their inventory at...

Markets Await Labor Department's Price - Trend Report

... mean investors will not trade on the news. But analysts said the Labor Department's **Consumer** Price Index -- due out at 7:30 a.m. Dallas time -- is not likely to...

... are unusually jittery about the price index. Financial markets were sent reeling Friday when a **separate** government index that tracks inflation at the wholesale level showed prices advancing at an annual rate of 13 percent.

Economists estimate the **consumer** index for September will be up 0.3 percentage points, or at an annual rate...

... 6 percent. But if the run-up in wholesale prices unexpectedly spills over into the **consumer** index, it could spark another sell-off on Wall Street.

"There are concerns in the...

...116.28.

Policymakers on the Federal Reserve Board will be among those eyeing Tuesday's **consumer** index. And while they also may find the report provides an incomplete picture, analysts warned...

...how much of last week's Producer Price Index spike will show up in the **consumer** index.

David Wyss, an economist at Standard & Poor's DRI in Lexington, Mass., expects increases...

... lots. He said auto prices only appear higher because there are not nearly as many **dealer** incentives this year as there were in 1998.

As they did with the wholesale index...

...to get a better idea about the underlying rate of inflation.

Economists like to eliminate **one** -time **price** hikes in volatile categories that are unlikely to affect long-term **price trends**. They also like to strip out energy costs, because the Fed cannot effect changes in...

...the big picture shows a very modest uptick in prices.

At the end of August, **consumer** prices were up 2.3 percent over their year-ago levels. That compares with a...

... includes a so-called market basket of 250 to 300 categories of items purchased by **consumers**. Each month the Labor Department checks prices on everything from gasoline and groceries to clothes...

...than half a percentage point off the pace of inflation.

Ginger R. DeMille

Economists also have criticized the **consumer** index for not keeping up with buying trends or advances in technology.

Steve Reed, an...

...because it tracks the cost of labor in goods, as well as the huge role **consumers** play in the economy.

"It's the best we've got," Mr. Wyss said.

Business: How to live with falling prices: Two generations of managers have taken inflation for granted. Now that prices are falling in many industries, how should they respond?

ECONOMIST

June 12, 1999

JOURNAL CODE: FECN LANGUAGE: English RECORD TYPE: FULLTEXT

WORD COUNT: 1624

(USE FORMAT 7 OR 9 FOR FULLTEXT)

... fact of life for more than half a century. But in industries as diverse as **consumer** products and steel, prices have been flat or falling in recent years. Many firms are...

...be picking up in America, partly as a result of higher oil prices-May's **consumer** -price index, to be released on June 16th, will give more clues to this-but...

...for a firm to consider the possible consequences. PricewaterhouseCoopers has recently issued a report for **clients** entitled: 'Defending shareholder value in an era of deflation.'

... to prudent monetary policy conducted by central banks. Although that would be a boon to **consumers**, many producers may experience falling prices, balanced by price rises elsewhere in the economy. Official...

...if done by a bank teller. But the Internet will also make it easier for **customers** to **shop** around, eroding firms' pricing power. Even while online shopping commands only a small share of total spending, its existence will inhibit conventional **retailers** from charging big mark-ups. Likewise, the euro will make it easier for **consumers** to compare prices across Europe, pushing them down in more expensive countries.

Companies can protect...

...aiming to achieve both.

Free-market poconomics

Innovation helps firms to raise the prices of **consumer** goods. Gillette, whose products include razors and batteries, has long boasted that its innovations persuade **consumers** to 'trade up'. Last year it introduced the Mach3 razor, which claims to deliver a...

...year at Dollars 4.99, a 70% premium on its Oral B Advantage and the **first** real **price** increase for four years.

Despite the introduction of these premium-priced products, Gillette's overall sales growth is flat, because it cannot raise prices on most of what it sells. **Consumers** in depressed economies in Latin America are reluctant to pay a premium even for a...

... a single day. This allows the firm to charge a premium and cut its costs.

Retailers are especially vulnerable to loss of pricing power because wages are a large cost that cannot easily be cut. To boost margins, many **retailers** are broadening their offerings beyond **consumer** goods. Britain's Marks and Spencer and Tesco, and Argentina's Disco, are all offering... The Economist, considers deflation and financial services. Because nobody can be certain of the future **trend** in **prices**, firms would at least be wise to prepare for the worst. One of its recommendations ...

...de-escalators.

Ginger R. DeMille

The most enduring habit of all is the annual pay rise which most people in most countries expect. When inflation is 2% workers may settle for a pay rise...

Autobytel.com Accredited Dealers ' Commitment to Business Model Enables Them to Maintain Entrepreneurial Spirit, While Delivering High Customer Satisfaction Marks

BUSINESS WIRE

Autobytel.com Accredited Dealers ' Commitment to Business Model Enables Them to Maintain Entrepreneurial Spirit, While Delivering High Customer Satisfaction Marks

SAN FRANCISCO--(AutomotiveWire)--Feb. 7, 1999--

Autobytel.com Accredited **Dealers** Discuss the Bottom-Line Implications of the Autobytel.com Business Model at the National Automobile **Dealer** Association Show

Autobytel.com Accredited **Dealers** outlined the tangible benefits of Autobytel.com for both **dealers** and **consumers** Sunday at the National Automobile **Dealers** Association (NADA) show in San Francisco.

On hand to discuss the implications of the Autobytel.com business model were three members of the Autobytel.com **Dealer** Advisory Board: Doug Waikem, President, Waikem Auto Group (Columbus, Ohio); Tom Vann, Owner/General Manager...

... President of Marketing, First America Automotive Group (San Francisco), a group of more than 20 **dealers** in Northern California.

Commitment Ensures Viability of Dealership

Autobytel.com has been offering forward-thinking automobile **dealers** a new way to sell cars and trucks since its inception in 1995. From its...

... an entirely new business model for selling vehicles, one that utilizes technology to lower a **dealer**'s overall costs while allowing cost savings to be passed on to **consumers**.

"We've long felt our business model is the key to the future success of **dealers** in North America," said Mark W. Lorimer, president and CEO of Autobytel.com inc.

"According to various research firms, **dealer** consolidation will continue at an increasing rate over the next decade. I predict that the **dealers** left standing are going to be the ones who have reduced their expenses to increase their profitability. **Dealers** who believe they can simply maintain the status quo by increasing gross revenues and passing their expenses onto the **consumer** are wrong."

"When history looks back at what Autobytel.com brought to the table -- it...

... owner of the \$100 million Waikem Auto Group, one of the first Autobytel.com Accredited **Dealers**.

The Autobytel.com business model requires that **dealers** completely commit to the program by establishing an Autobytel.com department within their dealership. The...

... capable of quoting competitive pricing, assuring a time-saving, hassle-free buying experience for the **consumer**.

Nearly four years after Autobytel.com's launch, demonstrating the real

benefits of this sales model to both **dealers** and **consumers** is finally possible.

Reduced Expenses = Satisfied **Customers** and Increased Profits

According to the company's calculations, a dealership that sells 100 vehicles...

...costs nearly \$126,500 (according to NADA, J.D. Power and Associates, and Autobytel.com **dealer** data).

Waikem, Vann and Babbington report that the implementation of the Autobytel.com business model...

...in marketing and personnel expenses on vehicles sold via Autobytel.com.

Due to this savings, **dealers** can offer **consumers** much more competitively priced vehicles, while still retaining a fair profit margin. Just as important, Autobytel.com Accredited **Dealers** are able to create long-term, **customer** -service-oriented relationships with **consumers**, insuring the dealership's viability for the next century.

"The Autobytel.com business model lets us offer Autobytel.com **customers** a lower price, by cutting our expenses considerably through **different** compensations plans, minimal marketing expenses and even a faster turnaround on vehicles, which reduces the interest we pay," explained Waikem.

Consumers Biggest Winners

Autobytel.com has changed the way America buys cars. In fact, the change has been so dramatic that some manufacturers are enacting **one - price** selling policies in an attempt to deliver the same "no-haggle, no-hassle" experience found...

...buying through Autobytel.com.

This move by manufacturers effectively takes the power away from both **consumers** and **dealers**. Instead of rewarding **dealers** who have control of their businesses and are able to deliver lower prices than the dealership down the street, manufacturers are demanding that **consumers** support **dealer** operations by paying a fixed price.

"When shopping for any item -- be it groceries, appliances or cars -- **consumers** want to be an active participant in the process. They need to know that they...

...they paid a fixed price determined by the manufacturer of that product," said Lorimer.

"When **consumers** choose to purchase via Autobytel.com, they have all the tools necessary to make a smart choice. Similarly, **dealers** who understand the business model and are able to profit while delivering high **customer** satisfaction experience a certain amount of pride that will never be found at a **one - price shop**."

Autobytel.com has shown that the **dealers** who want to succeed and prosper are ready for a change -- and they don't need to be forced into it by new **one - price** selling practices. **Trend** -setting dealerships realize that **customer** satisfaction is ultimately what will keep them in business.

"**Consumers** are rapidly embracing the concept of shopping via the Internet," said Babbington. "We are seeing..."

... purchase request volume from Autobytel.com and the decrease in foot traffic in our showrooms."

Customer testimonials arrive daily touting the benefits of online car buying: "I can't even imagine not using Autobytel.com," said Dan Waterman, a repeat Autobytel.com **customer** at Waikem Motors. "The process was easy, straightforward, and the price was nearly \$5,000 less than what I was quoted at my local dealership."

A Win-Win for Consumers and Dealers

Successful businesses make money and have profits. The trick is do it more efficiently so everyone wins and the profits are not at the expense of the **consumer**. As Vann said, "You win the game because you know how to control your expenses."

"Autobytel.com **customers** don't want to drive us out of ...All they

Ginger R. DeMille

want to know is that they got the best deal possible -- that no **other dealership** could beat the deal. If, in reality, we are still able to net more profits than the **dealer** down the street, our **customers** are just as happy. That's what Autobytel.com enables us to do."

"Selling cars...

... In order for the dealerships to stay in business, they must remain profitable. Though most **consumers** believe that dealerships make thousands of dollars on each new car they sell, the reality...

... that worldwide, almost \$310 billion is spent getting a car from the factory to the **consumer**'s driveway. Autobytel.com's ultimate goal is to move some of those dollars back...

... of the concept that reducing expenses will ultimately lead to greater profitability and long-term **customer** satisfaction. In fact, Vann has always espoused the concept of lowering expenses and runs his traditional sales in the same up-front, **consumer**-oriented manner in which he runs his Autobytel.com department.

Still, the inherent efficiencies in...

... Vann. "With the advent of the Internet, and, in particular, Autobytel.com, more and more **dealers** have begun to pay attention to the way we run our dealership."

"The re-training of the North American **dealer** body is no doubt one of the most challenging missions Autobytel.com has faced since...

... In order to maintain its commitment to this mission, Autobytel.com was quick to develop **dealer** training programs that educate **dealers** on how to get the most from the Autobytel.com business model.

Monthly training sessions, combined with field representation and the company's highly sophisticated **Dealer** Real Time(r)U.S.Pat.Pend (DRT) system, make Autobytel.com the leader in **dealer** education. This position has enabled the company to maintain its lead in both **dealer** and **customer** satisfaction.

About Autobytel.com

Irvine, Calif.-based Autobytel.com (www.autobytel.com) is a nationally branded Internet-based purchasing program for new and certified pre-owned vehicles and related **consumer** services, including automotive financing, leasing and insurance. Autobytel.com has assisted more than 2.5 million car **buyers** since its inception in 1995.

Autobytel.com's North American Accredited **Dealer Network** includes more than 2,700 dealerships, representing every major automotive manufacturer. Autobytel.com is a...

... system to trade stocks, whereas its chief US competitor, Nasdaq (the National Association of Securities **Dealers** Automated Quotation system), uses competing market-makers.

... often used as indications of trading costs in lieu of precise measurements. Some short-term **traders**, especially those who buy and sell at least once during a day, base their strategies...

...its relative infancy.

What constitutes a market?

An organised securities market or exchange is a **network** of potential **buyers** and **sellers** or their agents.

Although the term "market" originally connoted a central physical **location**, improvements in communication have allowed geographically dispersed individuals to form an organised market.

Organised markets...

... private sales are typically not cost effective because of the costs of searching for potential **buyers** and **sellers**, negotiating a price and ensuring the trade will still be consummated if one of the...

...generically as over-the-counter (OTC) markets.

OTC trades are arranged between a would-be **buyer** or **seller** and a large institution, typically an investment bank such as Morgan Stanley. Those trades can be tailored to meet the specifications of the **buyer** or **seller**, whereas in a public market trades are relatively homogeneous in order to enhance liquidity.

The OTC markets are more active in derivative securities, such as options, where some **buyers** or **sellers** seek highly specific contracts (particularly in terms of the time to maturity). However, the foreign...

...or sell particular securities. However, the integrity of those trades is more difficult to guarantee.

Dealer and auction markets

Dealer markets are familiar to lay **people**. The **dealer** (or market-maker) is essentially a middle man who buys at **one price** (the bid) and sells at a slightly higher price (the ask, or offer).

Dealers buy stocks into inventory, sell stocks from that inventory and may even sell stocks short.

Dealers attempt to make money from the spread (the difference between the bid and the ask...

...in their inventory.

They can manage their inventory by adjusting their quotes, by transacting with **other dealers** or by hedging in derivatives markets. Nasdaq and the London Stock Exchange (LSE) provide examples of important **dealer** markets for stocks; and most bond markets are **dealer** markets.

In an auction market, all orders to buy or sell are channelled to a central **location** (even if that **location** is an address in a computer) and a market-clearing price is determined by means...

... a set of rules (or an algorithm) that determines, among other things, the priority of **different** offers to buy and sell.

These rules are more complex than those of auction houses...

...s because in securities markets the supply of the item is not known when potential **buyers** submit their bids. Moreover, auction markets for securities can be discrete or continuous.

In a...

...for a sub-set of securities.

Call markets are seldom pure auction markets because a **dealer** (usually known ...US government securities. In these auctions, the fixed supply is allocated first to the highest **bidder** at the **bidder**'s price, then to the next highest **bidder** at that **bidder**'s price and so on until the supply is exhausted.

A continuous auction market is a hybrid of an auction market and a **dealer** market because of the specialist's role. **Customers** submit market, or limit, orders to a retail or discount broker. Those orders are transmitted...

... electronically or by a floor broker. The specialist for a particular stock matches (crosses) some **customers**' orders with each other where possible and provides additional liquidity by selling from inventory or

buying into inventory to accommodate **customers** ' orders.

Some continuous auction markets do not employ specialists although a subset of **traders** (variously known as "locals", "scalpers" or "jobbers") assumes that de-facto role by being prepared to take the opposite side of trades initiated by brokers on behalf of **customers** . During normal trading hours, the NYSE and the Tokyo Stock Exchange are continuous auction markets ...

...the CBOT for futures and options contracts.

One of the chief differences between auction and **dealer** markets (seen as an advantage by those who favour auction markets) is the greater extent to which **customers** trade with **customers** in an auction market with a limit order book.

If there is a limit order book in an auction market, the current quote reflects either a limit order from a **customer** or the specialist's quote. Thus, an incoming market order can be executed at a price established by another investor. In contrast, in many **dealer** markets (in particular Nasdaq) the current quote reflects the best quote (highest bid, lowest ask) by a **dealer** but not necessarily **customers** ' limit orders.

Consequently, in many **dealer** markets, **customers** ' market orders and limit orders are executed at **dealers** ' quotes, and not against each other.

For example, if the best **dealer** quotes are bid \$40 and ask \$40.75, a limit order to buy at \$40...

... not execute even if a market order to sell arrives and is executed at the **dealer** 's bid of \$40.

In fact, the limit order will not execute until the quoted ask falls to \$40.50.

Recent rule changes by Nasdaq allow **customer** limit orders for some stocks to be executed against market orders so this distinction is not as sharp as it once was.

Proponents of **dealer** markets point out that competition among **dealers** should provide more favourable trading conditions for investors than the auction market with its monopoly...

... enforce electronically, there is not a universally accepted set of protocols and rules. Second, unless **dealers** monitor their posted quotes constantly, those quotes become stale when new information arrives and **dealers** risk being "picked off" (taken advantage of by a **trader** with up-to-date information).

It is not feasible to program electronic systems to replicate human judgment in revising or suspending quotes to accommodate flows of information.

For example, **traders** know that quotes and limit orders need to be revised dramatically when Intel warns of...

...systems is slower than human reaction time, especially if the electronic system becomes congested as **traders** try to exploit stale quotes.

Third, proponents of floor trading argue that the physical proximity of **traders** on the floor provides clues and strategic information to facilitate trading (especially to enhance liquidity...

... with floor trading have made extensive use of electronics for transmitting or routing orders from **customers** to the trading floor. This creates interesting contrasts with orders being transcribed from computer screens they are simply a mechanism to match a **buyer** and **seller** at a price determined in another market, typically the closing price on a major exchange. Virtually all of the **customers** who trade on these electronic systems are institutions such as pension or mutual funds and...

... transactions costs such as fees or commissions and transactions or transfer taxes that are common **outside** the US. Investors' returns are reduced by the normal bid-ask spread and the price...

... a considerable obstacle to earning returns. For example, in May 1997,

Sharper Image (a catalogue **retailer** of high-end electronic gadgets and toys) was quoted as \$31/8 (bid) and \$33...

...4% per transaction not 7.4% per year, so if the investor is an active **trader** with a short holding period the spread looms large. Consider an analogy.

Instead of renting...

... the cost of this round-trip transaction. The bid-ask spread provides income to the **dealer** to compensate for the costs of carrying an inventory or of bearing the risks of short-selling if the **dealer** is willing to sell more than the inventory. Spreads are wider for more volatile stocks...

... than quoted or posted spreads. How this occurs depends on the trading system.

In a **dealer** market, trades can be negotiated within the spread, especially by institutions. In a continuous auction...

...markets.

The bid-ask spread must be at least the minimum tick size.

In markets **outside** the US, prices are typically stated in decimals (for example, in London, 10.26).

The...

... is a commensurate increase in volume, profits to those who post the spreads (specialists and **dealers**) must decline.

Liquidity

A market for a particular security is highly liquid (or very deep...

... it. Similarly, large trades can move the price of even highly liquid securities if other **traders** believe that such a trade is a measure of the amount of information possessed by the **trader**.

Other common indicators of stock liquidity are the bid-ask spread, the float (the number...

...until a buy order arrived.

Liquidity can be supplied in various ways. For example, a **dealer** or specialist might be prepared to buy into inventory any stock offered at the prevailing...

...set by the rules of the stock exchange.

Larger trades must be negotiated with the **dealer** or the specialist and, if the trade is sufficiently large, the trade may occur **outside** the market in what is known as the third market or upstairs market.

Trades above...companies, such as Sharper Image, such trades represent several days' normal trading volume. Would-be **buyers** and **sellers** of large blocks often rely on block houses (generally arms of investment banks) to trade...

...exchange.

For a block sale, the block house can adopt one of two strategies: either "**shop** the block" or buy the block and then attempt to resell it.

To **shop**, or position, the block, the broker contacts large institutions to determine their interest in the block or in pieces of the block.

Such a strategy exposes the **customer** to front running, that is, to the risk that when an institution is offered the...

... for BP in London was \$12.25 per share. Goldman resold those shares to institutional **clients** around the world within 36 hours for a price of \$11.75, a discount of...

... owned by Seagram), a discount of slightly over 5%. Merrill resold the shares to institutional **clients** within a day for \$46.75 per share, a profit (before expenses) of almost \$13m...

... made and comparing that with the price of the security after the trade

has taken **place** .

Counterparty risk

Counterparty risk unambiguously increases the economic costs of trading but the magnitude of...

...rational investors.

Every purchase and sale entails counterparty risk, that is, the risk that the **other party** to the transaction will not fulfil the terms of the agreed trade.

Stock exchanges establish...

... technically, the clearing house) becomes the counterparty to every trade. If either party defaults, the **other party** looks to the clearing house to fulfil the terms of the trade. The clearing house...

... in some emerging markets. Counterparty risk can manifest itself in various forms. For example, a **buyer** may not receive good title to the security or the **seller** may relinquish title to the security but may not be paid on time (or at...

...honoured under certain circumstances.

If the stock price rises after the supposedly agreed trade, the **seller** experiences remorse and if the stock price falls the **buyer** experiences remorse.

(To prevent that remorse from being translated into action, there must be a...

... that the terms of the trade will be honoured by both parties regardless of any **subsequent** movement in the **price** of the security.

Some institutional investors claim that, even in some established markets, the incidence...

...In those markets, an offer to buy a stock is akin to giving the putative **seller** a free option to deliver the stock if its price declines and to retain the...

TEXT:

...displayed right, the customers will buy," said Joe Soviero, executive vice president of Sango.

"Mass **merchants** should absolutely keep opening price points. The problem has been that they built their whole...

...he continued.
BACK TO BASICS

The branded and fashion lines should add layers to mass **merchants** ' assortments, not replace their volume business, **vendors** say.

A 20-piece set is the most popular configuration in mass **merchants** .
Retailers range from \$14.99 to \$109.99. Industry sources say approximately 60 percent of the business is done at \$19.99.

"Mass **merchants** have to be very competitive on price," said Young Kim, vice president of marketing for...

...squeezed by the housewares and china departments in department stores. At the same time, mass **merchants** are looking for opportunities on branded, better lines. The growth is on the better end."

Above all, said Jeffrey Grinspan, national sales manager for Sakura, "mass **merchants** want patterns that sell at a price point which is comfortable to their **consumer** ."

" **First price** , then **pattern** , then brand counts" to the mass **merchant consumer** , said Harmon Stein, president of Retroneu/Excel, which holds the Farberware license. "Dinnerware stops at a price point. Those who have traded up have lost volume."

Retailers are finding ways, however, to raise price points in their everyday business. Open stock and four-pack programs are higher ticket items for **retailers** . They account for an estimated 20 percent of the dinnerware business in mass **merchants** .

"Everyone holds their breath when they go over the magical price points in sets: \$19.99, \$29.99," said David Radin, spokesman for Corning **Consumer Products** . "There are better margins in open stock for the **retailer** ."

Ginger R. DeMille

Under Corelle's Impressions line, a 20-piece set retailing for \$40, will sell open stock at \$20 for a traditional five-piece **place** setting, or \$80 for service for four.

Target has come up with its own solution...

...line of accessories.

"Target changed the whole structure of the business, said a leading dinnerware **vendor** . "It's important now because **retailers** don't want of raise the prices on 20-piece sets. They have brought up...

ABSTRACT:

...automobile dealerships in San Antonio, TX, are currently using a strategy running counter to a **trend** . Gunn **offers** no-haggle, fixed prices for new and used cars. The Rikess Group noted that of 23,000 US new-car dealerships, only 1,000-2,000 **dealers** use a **one - price** strategy today versus nearly 2,000 in 1994. At Gunn, sales **persons** are paid a base salary, and are eligible for a monthly bonus after they sell their 6th car each month. Since the start of the **one - price** strategy, Gunn-Nissan acknowledges that **another dealer** has entered the competition. However, Gunn's Honda sales have clearly increased. Rikess predicts that **one - price** auto dealerships will eventually increase rapidly. Article provides other background information on the **one - price** strategy. ...

...program works; we can show you that it works," he said.

While a handful of **dealers** have practiced **one - price** selling for many years, the method made headlines in the early 1990s as **dealers** looked for ways to stay afloat during the recession.

Mark Rikess, president of Mark Rikess & Associates, a Los Angeles

Ginger R. DeMille

consulting firm that specializes in **one - price** selling, organized last week's seminar. He holds them three or four times a year for **one - price dealers** .

TREND HAS SLOWED

He said the trend of **dealers** turning to the selling method has slowed in recent months because **dealers** have been fairly profitable. When **dealer** 's profits are down they are more apt to take risks; that's why **one - price** selling was popular in the early 1990s, he said.

He estimates that about 10 percent of the 22,400 U.S. **dealers** use **one - price** selling. Rikess has about 300 **dealer clients** .

Issues discussed during the seminar included **one - price** used cars, niche marketing and Internet sales methods.

One panel discussion focused on how to advertise one-price selling without dwelling on price.

Don Polyschuk a Toronto Chevrolet-Geo-Oldsmobile **dealer** , was among those seeking a better way to get his one-price message across. Polyschuk...

J.D. POWER AND ASSOCIATES STUDY UPDATE REVEALS ONE-PRICE CAR DEALER PROFITS, GROWTH AND CUSTOMER SATISFACTION ARE UP

DATE: January 26, 1993 08:05 EST WORD COUNT: 413

...PRNewswire/ -- New information on the development of the no-haggle auto retailing philosophy shows that **one - price retailers** ' profit and productivity levels are higher than those using traditional selling techniques. According to J.D. Power and Associates' study of retailing **trends**, the elimination of **price** haggling at some **retailers** also leads to a substantially higher degree of **customer** satisfaction.

Based on research from "Volume 2, **One - Price** Selling: Revolution in the Showroom(SM)," J.D. Power and Associates estimates that the growth in **one - price retailers** from 1991 to 1992 was 71 percent, and the potential for future growth in the number of no-haggle

Ginger R. DeMille

dealerships is high. An estimated 15 percent of the auto **retailers** in the United States are projected to be operating on this basis by year-end...

...Doris Ehlers, account director and author of the study, "is the fact that while current **one - price dealers** are high on the concept, a third of those who were operating on that basis a year ago have abandoned the idea. Nevertheless, the number of no-haggle **retailers** increased dramatically from 1991 to 1992."

The analysis accompanying the report cautions **retailers** to carefully consider the pros and cons of a no-haggle concept because of the **customer** reaction. "It is more than simply a matter of posting prices on vehicles and selling...

...and value information instead of price," said Ehlers.

J.D. Power and Associates' "Volume 2, **One - Price** Selling: Revolution in the Showroom(SM)" includes details on the positive impact that **one - price** selling has had on overall profitability, salesperson compensation, vehicle inventory, advertising expenses and finance and insurance profits. In addition, it identifies changes in shopping patterns that are caused when a **one - price** operation is introduced into a market.

Critical to **one - price** selling success is its credibility with customers. **One - price retailers** are challenged to find the right advertising message and pricing strategies that will convince customers...

Multiplex retailers versus wholesalers A test of the total value of purchasing model

Lusch, Robert F; Vargo, Stephen L

International Journal of Physical Distribution & Logistics Management

v28n8 PP: 581-598 1998

ISSN: 0960-0035 JRNL CODE: IPD

WORD COUNT: 7233

...TEXT: relation to intended behavior.

Normative models

Normative models are typically extensions of one of three **supplier** evaluation models that are purported to be commonly employed in industry (Giunipero and Brewer, 1993...

...modifications. For example, Thompson (1990) proposes a modified weighted-point model that replaces single-point **supplier** evaluations with ranges for each evaluative criterion. Graphical representation of these ranges can be used to compare potential **suppliers**.

Some normative models recommend multiple-step approaches to **supplier** selection (see Table I). These models (e.g. Giunipero and Brewer, 1993; Smytka and Clemens, 1993) typically involve subjective evaluation of relationships followed by more objective evaluation of preselected alternative **suppliers**. Ellram and Siferd (1993) (see also Ellram, 1994) group all of these approaches under the...

...studies is clearly in the direction of the incorporation of performance, improved quality, relationship, and **other service** factors that affect total value, in addition to the more traditional and narrow concerns for selling **price**.

Positive analyses

This **trend** in purchasing management toward an emphasis on quality and service, in addition to selling price, is partially supported by empirical studies intended to assess evaluation criteria actually employed by organizational **purchasers**. However, relative attribute importance has been noted to vary across buying situations and product categories...

...modified-rebuy situations. However, they also found that post-purchase evaluation and search for potential **suppliers** was very limited in most industrial rebuy situations. Puto et al. (1985) found evidence of...

...barrier" in industrial buying. Specifically, they found that in a modified-rebuy situation, the current **supplier** was more likely to be selected even when an alternative **supplier** offered less risk (e.g. a guarantee). That is, **supplier** loyalty seemed to mediate risk taking.

Several researchers have noted differential relative attribute importance as...

...product classes.

Wilson (1994) in comparing a review of past studies concerning relative product and **supplier** attributes with a current survey of buying center members, suggests that there has been a...

...important element in this equation. A purchased product's total cost is made up of **initial price**, various direct and indirect costs associated with product quality, and a similar array of costs...

...service required to support acquisition and use of the product. It is not surprising that **purchasers** who strive to minimize total cost **place** greater emphasis on quality and service and less emphasis on price."

Most of the empirical...

...the selection criteria of internal users. Second, they are usually based on the selection of **suppliers** offering a single product or limited range of products, and therefore **supplier** analysis is inextricably intertwined with product analysis. Third, most are based on relative importance weights, but do not investigate the perceived performance attributes of those **suppliers** actually selected. Fourth, most rely on single-measure indices of the modeled attributes of total...

...Doyle et al., 1979; Puto et al., 1985), most do not explore the role of **supplier** loyalty, buyer inertia, and buyer-seller relationship in the purchasing decision. Of particular interest may...

...these variables may play in "overriding" other attribute weights.

Present study

Middlemen, either wholesalers or **retailers**, can attract customers by providing value-added services, such as directly lowering costs or providingcf. Stern et al., 1996). That is, whether classified as a wholesale- **distributor** or a **retailer**, the functions of entities that supply products to other entities are, by definition, services. Services...

PC software

Elzinga, Kenneth G; Mills, David E
Antitrust Bulletin v44n3 PP: 739-786 Fall 1999
ISSN: 0003-603X JRNL CODE: ANB
WORD COUNT: 13640

...TEXT: marginal-cost pricing. This seemingly peculiar practice is neither irrational nor predatory. One reason a **vendor** may "give" its software away is to hike the demand for complementary products it sells...

...price might suggest that browser software is unprofitable. But browser software generates revenues from portal **site** advertising and stimulates the demand for other kinds of software such as server software and...

...development tools.78

For these reasons, it is not surprising that, in real terms, software **prices** generally **trend** down. In fact, many software products' **prices** actually **trend** down in nominal terms.79 To induce installed base **users** to incur the switching costs of an upgrade, **vendors** often combine product enhancements while preserving or reducing prices. Piracy is another factor that puts...

...of price. Lower market prices reduce somewhat the incentive to pirate.

VII. Performance

The downward **trend** in PC software **prices** is a positive market performance indicator. Unfortunately, there is no published source of pricing data...

...cycles, multiple distribution channels, and bundling are preeminent factors.

It is possible to examine the **trend** in **prices** for particular products,

however. Table 6 exhibits the retail "street" price of successive versions of...

...1990 and 1998. These prices were those advertised by PC Connection, a large software discount **retailer**; each price is the **first price** advertised by PC Connection (on its Web **site** or in PC Magazine) after new products were introduced. From 1990 until 1995 (and the advent of Windows 95), a **user** of Windows required a version of DOS to run underneath Windows. The only retail sales...

...95 added plug and play connectivity, built in TCP/IP networking support, and an improved **user** interface. Windows 98 includes Web browser capability and can support multiple monitors. Controlling for these improvements and other additions that **users** value would mean the real price of Windows fell even more than table 6 suggests.

Applications software is not immune to the downward **trend** in **prices** either. Gandel estimated hedonic price equations for PC spreadsheets sold during the years 1986-1991...positive market performance indicator is the rate of technological change in the industry. Many software **vendors** regularly introduce new kinds of software, and upgrades of their software products may appear every...

List price information in residential appraisal and underwriting

Knight, John R; Sirmans, C F; Turnbull, Geoffrey K
Journal of Real Estate Research v15n1/2 PP: 59-76 1998
ISSN: 0896-5803 JRNL CODE: JRR
WORD COUNT: 5344

...TEXT: Multiple Listing Service data from a large metropolitan area, we create two price indexes, using **first** listing **price** and then selling price as the dependent variable in the hedonic regressions. The market is ...

...leading aspect of list prices in the list price-sales price relationship. We find that **different** segments of the market perform quite differently over the time period of our study, suggesting...

...aggregation. We also find, however, that market list prices continue to convey important information about **subsequent** selling **prices** in most market segments.

Introduction

The listing price is the starting point of the home...

...signal of home value it performs an important market function from the perspective of both **seller** and **buyer**. For the **seller**, the listing price provides an upper bound for expected offers and eventual selling price in...

...markets. Viewed together with house amenities, the list price may also

help identify a "motivated" **seller** . For prospective **buyers** , the listing price is invariably a key parameter for selecting homes to include in a search, and it strongly influences the **buyer** 's initial offer and ultimate purchase price. Inasmuch as many current housing markets are characterized ...

...price may assume increased importance in signaling house values. Because listing chronologically precedes home sales, **trends** in list **prices** in a market may indeed be precursors of **trends** in selling **prices** in the same market. This notion no doubt influenced the Federal National Mortgage Association (Fannie...

...listing prices of comparable unsold homes on the Uniform Residential Appraisal Report (URAR). If listing **prices** inform **subsequent** selling **prices** in a market, the information can be incorporated in the underwriting process, reducing the default...

...transactions involves aggregating data both cross-sectionally and longitudinally, over submarkets that may have very **different** price paths. The listing price-selling price connection is clearly useful for traditional residential appraisals that use near-neighbors in **location** , time and amenities, but the predictive quality of listing prices for the data-based approach...

...investigates the relationship within a variety of definitions of the market. Submarkets are defined by **location** , house size and dwelling age to determine the extent to which aggregation within a category...

...price-selling price connection. We find that while categorical subsets of the data produce very **different** price paths, the listing price-selling price relationship remains relatively stable. Submarket listing prices lead ...

Deregulated private water supply: A policy option for developing countries
Cowen, Penelope Brook; Cowen, Tyler
Cato Journal v18n1 PP: 21-41 Spring 1998
ISSN: 0273-3072 JRNL CODE: CTJ
WORD COUNT: 8030

...TEXT: envisage a situation where water can be obtained at lowest cost from a single dominant **supplier** within that geographic region.

We expect **suppliers** to offer standard packages to their consumers. If an individual is building a house, the water **supplier** will offer to outfit the house with pipes for some fixed sum, perhaps based on...

...for installing household connections, they routinely use this approach. If a house is already in **place** and already possesses a hook-up (perhaps as a legacy from a previous, regulated regime), the water **supplier** will offer so many units of water at a given price, so many more units...at marginal cost over some specified period of time. Both the fixed fee and the **subsequent** per unit **prices** would be determined by initial contract; Oi (1971) has analyzed the efficiency of this arrangement. Alternatively, if the hook-up is already in **place** , or if it is too costly to bargain over the hook-up fee, companies will...

...if it can obtain, solves all three of the efficiency problems discussed above. First, the **supplier** will produce a socially optimal amount of output. For any unit whose value exceeds its marginal cost, the **supplier** will produce it and offer it on the market. With perfect price

discrimination, a **supplier** never increases profit by withholding output from the market. Second, the **supplier** has firstbest incentives to engage in cost reduction. Any reduction in costs translates into a one-to-one increase in profits. **Suppliers** therefore will reduce their costs to the point where the social benefits of cost reduction...

...a perfect price-discriminating monopolist has first-best incentives with regard to product quality. The **supplier** captures all of the consumer surplus in the form of profits. That same **supplier** will therefore offer the product qualities that maximize consumer surplus, net of the cost of...

...highly regulated alternatives. In most developing and transition economies the key problem is to get **users** some minimal amount of clean water, not to satisfy all optimality conditions. Note that the...

...Third, the seller must be able to make good estimates of buyer demands. Fourth, the **supplier** must be able to commit to initial price offers. Each of these assumptions characterizes the...

Dealers' hedging of interest rate options in the U.S. dollar fixed-income market

Kambhu, John E
Economic Policy Review v4n2 PP: 35-57 Jun 1998
JRNL CODE: EPV
WORD COUNT: 9389

...TEXT: buy and sell sides of the market has contributed to this expansion. This balance allows **dealers** to intermediate customer demands by passing exposures from some customers to others without assuming excessive...

...ability to pass exposures back into the market, the markets' growth would be constrained by **dealers** ' limited ability to absorb customers' unwanted risks.

The balance between customer needs on both sides...

...largest of the derivatives markets, where only a small amount of residual risk remains with **dealers** .1 In the over-the-counter U.S. dollar interest rate options market, however, significant residual risks are concentrated among **dealers** , who have sold 50 percent more options to customers than they have purchased (Table 1, top panel). This imbalance has left **dealers** with significant net exposure to price risk that must be hedged in the underlying fixed-income markets.

Until now, the scale of hedging across all **dealers** in the over-the-counter interest rate options market has not been studied in the literature. The concentration of sold options among **dealers** , however, makes it an ideal **place** to explore how **dealers** ' hedging of options affects underlying markets. Using data from a global survey of derivatives **dealers** and other sources, this article estimates the volume and potential impact of such hedging by U.S. dollar interest rate options **dealers** . In our analysis, we address two questions: First, are **dealers** ' hedge adjustments large enough to affect trading volume and liquidity in the most common hedging...

...for over-the-counter interest rate options? In addressing these questions, we also consider whether **dealers** ' dynamic hedging transactions have the potential to amplify price shocks.

We find that, on the whole, transaction volume in the underlying fixed-income markets is large enough to enable **dealers** to manage the risks incurred through their intermediation of price risk in the interest rate...

...liquid hedging instruments is more than large enough to absorb the transaction volume generated by **dealers** ' dynamic hedging. For medium-term maturities, however, an unusually large interest rate shock could cause...

...trading demand that is high relative to turnover volume in the more liquid trading instruments. **Dealers** then face a risk management tradeoff between reducing price risk or incurring the liquidity costs...

...occurring during a currency crisis or a period of high inflation, are likely to present **dealers** with this hedging problem.

In addition to analyzing hedging volume, we examine the term structure...

...options in response to a price shock can introduce transactions large enough to amplify the **initial price** shock or to affect market liquidity. In asset **price** dynamics, such "positive **feedback** " occurs when an **initial price** change causes a shift in investor or trader demand that leads to a further change...

...down further. The hedging of options also has the potential to cause positive feedback because **dealers** typically adjust their hedge positions by selling (buying) the underlying asset after its price falls...

...purchase) of stocks when prices fall (rise).² Although no empirical proof exists that positive **feedback** affects market **prices** , a number of papers (for example, Bank for International Settlements 1986, Grossman 1988, Gennotte and...in asset prices. Some of these forms of intermediation, however, rely on the ability of **dealers** to manage their risks dynamically. In the absence of market liquidity which makes dynamic risk management possible- **dealers** would exact higher premia for their intermediation services. Some investors and fund managers may also...

...on assumptions about the robustness of that market liquidity. A sudden realization by investors and **dealers** that expectations of market liquidity were overly optimistic could lead to a sharp adjustment in...

Conditional price trends in the aftermarket for initial public offerings

Affleck-Graves, John; Hegde, Shantaram; Miller, Robert E

Financial Management v25n4 PP: 25-40 Winter 1996

ISSN: 0046-3892 JRNL CODE: FMG

WORD COUNT: 8380

...TEXT: turn out to be underpriced with those that are overpriced.

Only Miller and Reilly (1987) **separate** the performance of initially underpriced and overpriced IPOs. They find that over the first 20...

...The price formation process for IPOs may be susceptible to the existence of significant conditional **price trends** in the short-run aftermarket for several reasons. First, there exists a growing body of...

...extremely difficult. Consequently, the initial return on an IPO (i.e., the difference between the **first market price** and the offer price) reveals significant information because it provides the first public indication that...

...signaling theories (see Allen and Faulhaber, 1989; Grinblatt and Hwang, 1989; and Welch, 1989) the **initial market price** provides a signal of the quality of the IPO.

Second, the **first market price** may fail to reflect fully all available information because of the potentially fragmented market for...

...typically small and the underwriters, often facing excess demand, ration new issues to their regular **clients** , who constitute a small subset of potential investors. Initial trading in the aftermarket serves to disseminate information about the value of IPOs to other investors. While **initial upward price** movement of underpriced IPOs spreads favorable information, the available supply of shares is restricted because...

...in a sequence of daily positive returns. In the case of an overpriced issue, the **first market price** fails to reflect the available information because of price stabilization by the underwriting syndicate. As the syndicates disband at varying times for the **different** IPOs, this leads to gradual downward price adjustment on average and sequential negative daily average...

...Such effects, however, may be offset by incentives provided by the syndicate to induce informed **traders** to reveal their private information while the offering price is being set. For example, in Benveniste and

Spindt (1989) and Benveniste and Wilhelm (1990) informed **traders** have an incentive to understate their interest in a new issue in the premarket, but ...

...new issues by underwriters and of informationally fragmented markets for IPOs may lead to conditional **price trends** in the short-run aftermarket for IPOs.

II. Data and Research Method

Our sample consists...

...1975-1991 period. Issue characteristics were obtained from Going Public: The IPO Reporter and the Investment **Dealers** Digest, and price information was collected from the Center for Research in Security Prices (CRSP)

Shopping around for a juicier contract

Bennell, Peter

Purchasing & Supply Management PP: 16-20 Feb 1996

ISSN: 0309-7242 JRNL CODE: PSU

WORD COUNT: 1533

...TEXT: allows for much more accurate estimating of likely costs. Another key factor in briefing the **supplier** is to give as much background information about individual **sites** as possible. This should cover areas such as whether they are high or low voltage...

...distribution tariff; what regime are they on and as much data as possible about the **site**'s operation. This information can often be deduced by a **supplier** from a current bill. Both sides need to start from this point of common knowledge...

...contracts each year can be costly in terms of time and resources - particularly for multi- **site** purchasers where recalculations during negotiations can be complex - and with prices already low, savings are becoming increasingly small.

Experience at Eastern has shown that **customers** with 24 or 36 month contracts have generally found better value deals. In a competitive market, **suppliers** cannot offer prices away from the market price and so **purchasers** make the savings they are looking for. But longer contracts also allow a relationship to be built between **customer** and **supplier** which, in turn, can lead to considerable benefits beyond lower prices. When a **supplier** understands the **customer**'s needs, help can often be offered by tailoring the contract precisely or adjusting the consumption pattern. **Suppliers** can also help with questions of contracting and energy efficiency. One **customer** in the food processing business even found that Eastern was able to help with the...

...have been agreed, then both parties have a basis for discussion and understanding of the **subsequent** contract **price** and conditions. Price, naturally, remains of key interest to **purchasers**, but the comparison of various offers can be awkward with figures presented in very **different** formats by the various **suppliers**.

A number of software packages are available, designed to compare offers on a like for...

...Appraise 2000, but the final decision shouldn't be based solely on money. Although, in **one** sense **price** is key, because you are basically buying a commodity, it is also very important to look at the basis on which the **supplier** has put the tender together. Discussion with your **supplier** should reveal the optimum length for your contract and it is worth seeing if services...

...and how frequently? Details such as these can be vital, allowing you, your accountants and **site** managers to make full use of the available information. At Eastern Electricity we are very mindful of the contrasting working, accounting and management cycles of **different** industries.

Some of our customers, often those with a large number of **sites**, want the information on a daily basis and in a graphical form so that this... consumption. Once you have established the consumption patterns for your company and for your various **sites**, you can then begin to become far more sensitive in your response.

Also, a site...

Behavior of retail prices: A note on market integration in the U.S.

Pryor, Frederic L

Eastern Economic Journal v21n1 PP: 83-95 Winter 1995

ISSN: 0094-5056 JRNL CODE: EEJ

WORD COUNT: 5695

...TEXT: ISSUES AT STAKE

The key element in testing a dynamic version of the law-of- **one - price** is the determination that the share of transportation costs in total costs has declined since...

...rate of 3.2 percent.(1) This was considerably lower than the increase of the **consumer** price index (CPI), and it was also lower than for any commodity group under consideration in the statistical analysis below, except clothing. Such data on relative **price trends** say nothing, of course, about changes in cost shares. But if we make the reasonable assumption that the price elasticity of transportation expenditures for producers and **retailers** is less than unity, then the share of transportation costs, measured in current prices, should...

...prices across the five large cities used in the sample have changed enough to influence **trends** in **price** variations. Thus, falling transportation costs are the key.

Five reasons can be offered to explain why the dynamic version of the law-of- **one - price** might not apply in the domestic economy at the retail level when comparing average prices...

...across large cities.

Rising Search Costs

The narrowing of price differences across space assumes that **consumers shop** assiduously for the lowest price with little regard to the cost of search. But analysis...

...such a search is relatively inexpensive and the potential savings are great. For instance, some **consumers** wishing to buy a new automobile are willing to search a considerable distance from their...

...unless the good is bought repeatedly. In the course of economic growth, the value of **shoppers** ' time rises since the value of alternative uses of time increases with a rising per capita income. Thus, as per capita income rises we would expect less search by **consumers** , especially for heterogeneous goods. As a result, we would also expect price dispersion over space...

The relative importance of supplier selection criteria: A review and update
Wilson, Elizabeth J

International Journal of Purchasing & Materials Management v30n3 PP:
35-41 Summer 1994

ISSN: 0094-8594 JRNL CODE: JPR

WORD COUNT: 3634

...TEXT: other inventory management services offered by suppliers to gain a competitive edge in their marketplace.

Supplier Selection Criteria Based on Product Categories
Lehmann/O'Shaughnessy (1974) and Evans examined the relative importance of **supplier** selection criteria on the basis of four **different** categories of products. Information on this situational variable was included in the author's present...

...products whose uses are routine.

For procedural problem products, delivery is again one of the **supplier** selection criteria that has shifted dramatically from first in importance in past years to fourth...

...be taught how to use the product.(13) Employee training is a dimension of a **supplier** 's service capability; thus, effective training of personnel in the buying organization should be of greater concern in highly competitive global markets.

Shifts in the importance of **supplier** selection criteria for performance problem products and political problem products are generally parallel for all...

...important over the years, while delivery is not as important as it used to be. **Price trends** , however, are **different** for the two types of products. For political problem products, significance of the price factor ...appears that there has been a shift away from price as a primary attribute in **supplier** selection. Price was ranked second in importance in early studies, while it tended to be less important in the current

examination of **supplier** selection criteria.

A second research question asked how **supplier** selection criteria have changed over time. The examination of studies conducted in 1974, 1982, and

...of the product. It is not surprising that purchasers who strive to minimize total cost **place** greater emphasis on quality and service and less emphasis on price alone.

This study has reviewed decision criteria that are used in practice in the selection of **suppliers**. From an academic standpoint, the longitudinal examination across studies is useful in establishing benchmarks for...

...Inexperienced purchasers may gain an enhanced perspective on how to be effective in working with **suppliers** that are or may become "**partners**." In addition, new buyers may better understand how to identify the attributes to focus on in negotiating with **suppliers**, given **different** buying situations and **different** types of products.

Return on capital employed in the National Health Service

Humphreys, Gordon; Shaw-Taylor, Bill

Management Accounting-London v71n11 PP: 28-30 Dec 1993

ISSN: 0025-1682 JRNL CODE: MAC

WORD COUNT: 2862

...TEXT: in the short term, at least, the arrangements will ensure that the high-cost, inefficient **provider** is protected' (page 29).

THE EQUALISER

Presumably, principle three is intended to prevent a hospital...

...from other localities and manifesting the 'tour operator syndrome', of which the symptoms are angry **customers** finding out that the **person** sitting next to them on the plane has paid only half the price for the same holiday.

What mechanism prevents the Cosy-glow Cornflake Company from selling at **one price** to Tesbury and another to Sainco? There are no rules issued by a National Grocery Service, but supermarket giants may, for example, insist in their contract that the **supplier** undertakes not to sell to anyone else at a lower price, including any quantity rebates. The **supplier** can decline if he wishes! There is nevertheless scope for ingenious **suppliers** to reward the **customer** for more business by assistance with promotions, staff training, undertaking to deliver in the middle of the night...

The conventional deterrent is that a **customer** who learns that another **customer** has been charged lower prices will, at the **next price** negotiation, hurl the evidence in the teeth of the **supplier** and insist on equal treatment plus compensation for past overcharges. The outcome will depend on who uses most leverage.

A crafty ruse used by **retailers** selling, say, dishwashers and claiming never to be beaten on price is to arrange that their supplies of a branded machine are labelled with a slightly **different** model number so that they can claim non-equivalence. More honest, perhaps, is a hotel selling at **different** rates to two tour operators, providing 'free' wine to **clients** covered by the higher-price contract: the higher specification does not have to be pro...

... furnace rivals at home.

That's a far cry from the pattern that was in **place** earlier in this decade. Japan, even as late as 1995 was major ferrous scrap importing nation which took in almost 800,000 tons from U.S. **suppliers**. This year by comparison, Japanese steelmakers have bought only 13,229 tons of ferrous scrap...

...once the largest overseas market for U.S. ferrous scrap exporters, but now in second **place** behind Canada-remains weak, Shipments to South Korea by U.S. scrap exporters have fallen...

...basis No.1 heavy melting steel price, the tag that most of the exporters and **traders** use as benchmark for their pricing calculations. They instead appear to be the average price...

...and structural scrap).

"Premiums are dead these days," he added. "The Koreans are the only **buyers** in the market these days and they are not paying anything extra for the bonus...

...it doesn't matter if you send us heavy melt or shredded. There's only **one price**," said another California based **trader**.

Less demand for scrap overall and for the pricier grades is the main reason, he said, but at the same time, the few **buyers** in the market are being flooded with offers, each one lower than the previous **offer**.

Other **patterns** have changed as well, he said. Now the exporters are likely to see only one...

...and we are all beating each other's brains out for every sale."

And in **place** of tenders for shiploads of iron and steel scrap, explained another scrap **trader**, some of the Korean steelmakers are purchasing more pig iron from Chinese and Japanese producers...

How to Sell Machine-Made Rugs

Valero, Greg
Flooring, p30
August, 1997

Language: English Record Type: Fulltext

Word Count: 1891

... experts say, is actually one of the easiest segments of a store to manage and **suppliers** can play a pivotal role in the process. **Suppliers** offer marketing and merchandising programs and sales training to help **dealers** create the right product mix, minimize out-of-stocks and overstocks and boost profit margins.

For example, some manufacturers offer turnkey packages designed to get **retailers** into the rug business. These programs, called rug galleries, essentially work like this: for one price, a **retailer** receives a certain number of products, merchandising vehicles, marketing and co-op advertising support. **Retailers** have the advantage of purchasing a broad selection of products from one **supplier** as opposed to cherry picking rugs from several **vendors**.

The benefits of gallery programs are twofold: **vendors** increase sales in local markets while **retailers** capitalize on a fast-growing

Ginger R. DeMille

business segment. The financial commitment for **retailers** enrolled in gallery programs generally depends on the quality and number of rugs purchased. The...

...the best ways to merchandise rugs is to display them in a prominent area where **customers** can see and feel them. Area rugs are displayed in everything from flip-racks and...

...is to present a collection of rugs in a selling environment that would make the **consumer** comfortable in making a choice,' Shaw's Whitfield said. 'You need a large selection in the store so **consumers** have a lot to choose from.'

The type of merchandising system utilized to display rugs depends largely on the amount of floor space dedicated by the **retailer**. One of the most popular display vehicles for machine-made area rugs is a swing...

...include hang tags to provide consumers with important information, such as available sizes and prices.

'**Retailers** are realizing if rugs are shown properly, the display serves as a silent salesperson,' said...
...she is contemplating to buy. It needs to be well lit to show colors and patterns.'

Best **offers** merchandising displays designed to meet the individual needs of **retailers**. 'We ask our clients how much space we have to work with,' Kennaugh explained. 'Then...

...can tell how many rugs he can display based on that configuration.'

Some of the **merchandisers** offered by Best include conventional swing arm displays that hold 20 to 50 6 x...

...not only display space, but also enhance the appearance of a showroom,' Kennaugh said. 'Progressive **retailers** use our fixtures to provide a foundation to make a fashion statement.'

There are floor covering **dealers** who attempt to stock as many rugs into a small area as possible, which Kennaugh...

One-price will stay, study says

Automotive News, v0, n0, p1

August 31, 1992

Language: English Record Type: Fulltext

Document Type: Magazine/Journal; Tabloid; Trade

Word Count: 770

... of buyers 'dislike the negotiation process and distrust automotive salespeople,' the Power study suggests that **dealer** -initiated, one-price strategies may be the best way to win over weary consumers.

'We...

...t happy with the way things are now and they want to buy cars a **different** way,' said Doris Ehlers, a J.D. Power account director who headed the study. 'To...

...Associates is a market research firm in Agoura Hills, Calif.

Ehlers estimates that hundreds of **dealers** use the single-price procedure. Although that is a tiny portion of the nation's 23,000 **dealers**, the practice has attracted lots of attention this year.

Advocates say it clears up the...

...process itself. It also has been billed as a way to gain attention and improve **customer** satisfaction.

Even the National Automobile **Dealers** Association is taking the concept more seriously.

'We're critical of any move away from salespeople, and some **one - price dealers** seem to be going that way to cut expenses,' said Tom Webb, NADA's chief economist. But Webb said he has nothing against the **one - price trend** as it addresses 'finding ways to make the sales experience more pleasant for the **customer**.'

Ehlers studied an original group of 24 **one - price dealers** in April and May to reach her findings. Since then, she has talked to 39 **other dealers**. And she says she has 'a huge stack of messages from other **one - price dealers** who want to talk about what they're doing.'

The original group of 24 included many domestic-make **dealers** and **dealers** whom Ehlers calls 'desperate to try anything to increase sales.' But she said that is changing rapidly.

Today, she says, import and domestic **dealers** - successful and marginal - are trying the idea in equal numbers.

Some results from the study:

Ninety-two percent of the **dealers** studied said sales have increased since they went to one-price selling. Greg Stewart, chief...

...said his sales have doubled to 60 units a month since he switched.

Half the **dealers** said their average grosses have increased since the

onset of one-price. Twenty-five percent...

... a testimony to the sick state of department store retailing.
What's bringing in the **customers** to A Real New York Bargain? Real bargains, of course. Everything in the store sells for \$10 or less. Recently, **shoppers** there found racks of ladies' Forenza jeans, a brand put out by the Limited, that...

...you're not likely to find Gucci goods at the country's growing number of **one - price** stores, you will find many inexpensively to moderately priced apparel brands such as Esprit, Guess...

...consists of first-quality sweaters, jeans and blouses, not "irregulars" or seconds. Depending upon the **retailer**, the items sell for \$7 to \$15 each--just the right price points for today's cautious **consumers**. The goods find their way into **one - price** stores because they didn't move quickly enough off the floors of higher-priced **retailers**. In this sense, the **one - price** stores and enormously popular outlet stores (FORBES, May 27) are kissing cousins.

The **one - price** store, typically situated in a strip shopping center anchored by a supermarket or drugstore, is...

...have succeeded by offering variety store merchandise generally priced at \$18 or less.

The latest **trend** in **one - price** retailing is specialization in clothing. The man often credited with bringing the **one - price** concept to clothing is Henry Jacobs, chairman of publicly traded **One Price** Clothing Stores, a \$110 million (sales) operation based in Duncan, S.C. Jacobs' 365 stores...

...were down only 3% from the year before.

Jeffrey Glik is sure doing well in **one - price** retailing. Glik, 35, is the fourth-generation president of Glik's, a St. Louis retailing...

...three more each year. Glik does \$137 per square foot in his department stores; in **one - price** shops, \$225.

"It's too easy to walk into a department store and get disappointed because the prices are unaffordable," says Glik. "There's no greater motivation to **shoppers** than a sign that says \$10 And Less."

Even in tough economic times, women prowling **one - price** stores can buy faddish and fun clothing on impulse, much as they used to do in department stores. At \$10 and under, fashion becomes almost disposable.

"If you **shop** in a department store, you can't even afford ten new outfits a year," says Sharon Frank, who runs her own retail buying office that selects merchandise for off-price **retailers** and used to run the New York buying office for Limited stores. "In one of..."

...sales on \$10 And Less newspaper and radio ads; the industry average for a specialty **retailer** of Glik's size is 3.6%.

Low capital costs also help. "I can set..."

... merchants want patterns that sell at a price point which is comfortable to their consumer."

" **First price** , then **pattern** , then brand counts" to the mass **merchant consumer** , said Harmon Stein, president of Retroneu/Excel, which holds the Farberware license. "Dinnerware stops at a price point. Those who have traded up have lost volume."

Retailers are finding ways, however, to raise price points in their everyday business. Open stock and four-pack programs are higher ticket items for **retailers** . They account for an estimated 20 percent of the dinnerware business in mass **merchants** .

"Everyone holds their breath when they go over the magical price points in sets: \$19.99, \$29.99," said David Radin, spokesman for Corning **Consumer** Products. "There are better margins in open stock for the **retailer** ."

Under Corelle's Impressions line, a 20-piece set retailing for \$40, will sell open stock at \$20 for a traditional five-piece **place** setting, or \$80 for service for four.

Target has come up with its own solution...

...line of accessories.

"Target changed the whole structure of the business, said a leading dinnerware **vendor** . "It's important now because **retailers** don't want to raise the prices on 20-piece sets. They have brought up...

Changing of the CPU guard. (80386 systems become new entry-level central

processing unit standard) (Smart Shopper: Ad Watch)

Computer Shopper, v12, n6, p791(1)

June, 1992

ISSN: 0886-0556 LANGUAGE: ENGLISH RECORD TYPE: FULLTEXT; ABSTRACT

WORD COUNT: 410 LINE COUNT: 00031

... the 386SX this spring. It just might be that the 386DX CPU has taken its **place** as the new entry-level system. (See Computer Shopper's

April issue, page 200.)

What a difference a year makes--last year, a direct **buyer** was faced with spending almost \$1,200 more to buy a 386DX, but today that...

...has jumped into the fray, with good prices, better than average service, and a huge **customer** base.

While more and more **vendors** are bundling a variety of software programs with their systems, Mile-Hi is the first and only **vendor** promising Windows 3.1 as a system upgrade.

Here's another **trend**: **price** points. Begun a few months ago by Naga Systems' theme of "Three Great Computers, **One Great Price**," new and campaigns by Insight and other **vendors** echoes the how-many-can-you-afford-to-spend? approach to selling systems.

Vendors are starting to restructure their service and support offerings.

Zenon recently dropped its on- **site** service policy, citing a reluctance to allow a **third party** to work on its machines. The **vendor** says that it can provide a quicker turnaround on parts than an independent service company. And CompuCity found that its **customers** weren't always interested in on- **site** service and extended warranties, so it lowered system prices and now offers these features as upgrades. A smarter tactic, since it allows the **buyer** the opportunity to opt for support as well as price.

EXTENDING THE MONETARY SEARCH ENVIRONMENT (PRICE DISPERSION, SEARCH FRICTIONS)

Author: CAMERA, GABRIELE

Degree: PH.D.

Year: 1997

Corporate Source/Institution: THE UNIVERSITY OF IOWA (0096)

Supervisors: DEAN CORBAE; STEVE WILLIAMSON

Source: VOLUME 58/08-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 3225. 120 PAGES

In the first chapter we examine availability of matchmaking services in a monetary economy with search frictions. A costly multilateral matching technology provides perfect intermediated matches. A costless bilateral matching technology provides random matches but is characterized by a trading externality. Multiple equilibria exist: agents may search, trade in the intermediated sector, or do both. The volume of intermediated trade is endogenously determined. Money and intermediated trade may coexist, a welfare inferior outcome if the trading externality has increasing returns. Under certain conditions non-monetary equilibria with intermediated trade are welfare superior to monetary equilibria with search.

In the second chapter we study how changes in the quantity of money affect price dispersion or more generally the equilibrium distribution of prices. We relax the storage technology for fiat money in a prototypical search model to answer this question. When multiple units of currency can be stored, **buyers** and **sellers** enter matches with potentially **different** willingness to buy or sell. Across the distribution of possible matches, then, prices will generally differ even though agents have identical preferences and technologies. We provide existence conditions for a particularly simple equilibrium **pattern** of exchange and **prices**. We show that in the limiting case where search frictions are eliminated, equilibrium prices are uniform. We also show that average prices increase with higher money supply.

The third chapter extends the work by Green and Zhou (1995). In an environment characterized by fixed production costs and an exogenous upper bound on money holdings, we provide existence conditions for a particularly simple equilibrium exchange pattern where a unit of currency is traded for a fixed quantity of goods, in all matches. Our specification rules out both the Pareto-dominance of non-monetary gift-giving outcomes, and the existence of **one - price** equilibria with unbounded money holdings, as suggested by Green and Zhou. It is also shown that the money inventory technology need not be binding in the presence of fixed production costs. When the conditions for existence of "**one - price**" equilibria are not met, we provide numerical examples of equilibria with diverse transactions **patterns** which generally imply **price** dispersion.

National to charge **one price**

THAILAND: NATIONAL TO LAUNCH FOUR NEW PRODUCTS

Bangkok Post (XBN) 17 Aug 1995 P.19

Language: ENGLISH

Maker and **distributor** of National electrical **consumer** products, AP National Sales will introduce four new products; a new home shower water heater, microwave oven, rice cooker and air purifier in Thailand in a bid to boost its product market share. The company claims that it holds 80% share of the water heater market which is valued at over B 650 mn in Thailand, 15% of the B 530 mn microwave oven market and 25% in the B 1.2 bn

Ginger R. DeMille

rice cooker market. The company hopes to achieve an annual sales of B 10 bn by year 2000. AP National Sales will also implement a **one - price** policy which will ensure that retail stores sell National products at a uniform price. The new price policy will also reduce the **price -cutting trends** among **dealers** . The new policy will be implemented in October 1995 in Bangkok and will spread to the entire **dealer network** in 1996.

AB- <NV> NOVELTY - A control unit (114) analyzes inventory amount signals to determine inventory amounts in storage receivers (104) which store inventory (150). The control unit is capable of analyzing the inventory amounts and inventory price information to determine if an inventory order shall be **placed** . |

AB- <BASIC> DETAILED DESCRIPTION - Amount indicators (108) respectively determine an inventory amount (151) in each storage receiver, and generate inventory amount signals representing inventory amount in the storage receiver. **One** inventory **price** source (126) provides inventory price information from one inventory **vendor** (200). The control unit receives the inventory amount signals from the indicator and the inventory price information from inventory price source. An INDEPENDENT CLAIM is also included for an inventory management method for providing information about inventory amounts and inventory ordering to manufacturing **site** and inventory **vendor** .

USE - For providing information about inventory amount and inventory ordering to manufacturing **site** and **vendor** .

ADVANTAGE - Saves labor since inventory management that involves large number of tasks is automated, operation cost is minimized. Provides real-time inventory management of supply at **site** , including comparative pricing and purchasing abilities. Sends information to **vendor** 's manufacturing schedule, forecast possible manufacturing based on historical, estimated future, or market data and indicators. Provides display of data in a useful format to a **vendor** , **customer** , and manufacturer.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the inventory management system.

The system includes scanning terminals (24) operable by either
customers or store personnel, and payment terminals (28) which service
 a number of scanning terminals. The scanning terminal communicates with
 a **central processor** (22) for determining prices from the coded
 identities of products.

Electronic payment (68) can be optionally accepted at the scanning
 terminal, or a transaction is opened there and closed when payment is
 accepted at a payment terminal, also coupled to the **central**
processor . Video monitoring (42) allows the image of the products
 being scanned to be compared with the image expected from their scanned
 code, for identifying any discrepancy.

ADVANTAGE - Faster checkout of **shoppers** than conventional system
 and also allows **shoppers** to carry out self checkout.

Dwg.1/2|

AB- <US> US 5494136 A

An automated retail checkout system, comprising:

at least one scanning checkout terminal for **location** at a checkout lane, including a scanner operable to read product identity information from coded labels on products presented for purchase;

a **central processor** coupled to the scanning checkout terminal, the **central processor** being coupled for data communication with the scanning checkout terminal, the **central processor** including a memory indexing price information with the product identity information, the **central processor** and the scanning terminal being operable in conjunction to accumulate a transaction total from a series of said products presented for purchase;

at least one of each of an attached payment checkout terminal and a remotely located payment checkout terminal also coupled in data communication with the **central processor**, each of the attached and the remotely located payment checkout terminals being operable to effect financial transactions including acceptance of payment for transactions initiated at the scanning checkout terminal, wherein the scanning checkout terminal is operable by **customers** and by store personnel, and the attached payment checkout terminal and the remotely located payment checkout terminal accept each payment and are operable by store personnel only;

at least one video output device operable by store personnel, the video output device being coupled to a video input device at the scanning checkout station, and wherein a service terminal is coupled in data communication with the **central processor** and operable by said store personnel to input at least **one** of **price** and identity information for a product presented for purchase at the scanning checkout terminal; and

a bagging receptacle at the scanning checkout terminal and a transport for moving products from the scanner to the bagging receptacle.

PRICE INQUIRY METHOD FOR ELECTRONIC TRANSACTION

Abstract: A price inquiry method for electronic transaction includes such steps as advancing the first price-inquiring data to the product provider for particular product by a buyer, receiving said first data by said provider and determining if the transaction can be conducting, providing the first price to the buyer by the product provider, receiving the first price by the buyer and determining if the first price can be accepted or advancing another price-inquiring data, and repeating said steps until the transaction is completed or cancelled.

AB- PROBLEM TO BE SOLVED: To provide an auction system which carries out transactions on an imaging device at a fair price commensurable to its quality, and also provide an auction management server. SOLUTION: The auction system comprises a **seller** side terminal 104 which a **seller** of a digital camera 10 operates, a **buyer** side terminal 106 which a **buyer** of the digital camera 10 operates and an auction management server 102 which is connected to the **seller** side terminal 104 and the **buyer** side terminal 106 via the Internet 108. On the basis of quality data 80 on the quality of the digital camera 10 stored in the flash ROM 50 of the digital camera 10, the price computation part 222 of the auction management server 102 computes an auction **start price**, and the Web **site** management part 220 of the auction management server 102 presents the auction **start price** computed by the price computation part 222 and the quality data 80 of the digital camera 10 to the **buyer** side terminal 106. G06F-017/60

AB- PROBLEM TO BE SOLVED: To provide an **intermediary** system characterized in that it introduces a **seller** by a means of bidding to common **consumers** trying to purchase a commodity by a procedure of joint purchase on the Internet. SOLUTION: A registered **consumer** identified by a registered **consumer** authenticating means 11 using a home page of a management center 4 as an interface posts a commodity desired to purchase by a joint purchase posting means 14, invites joint **purchasers**, and posts a **start price**. A joint purchase participation applicant browsing this ID finished in registration and participates in the joint purchase. When joint **purchasers** reach capacity, registered **sellers** identified by a registered bid **seller** authenticating means 13 start a bid by a bid managing means 15 and a bidding situation is posted real time on the home page of the management center 4. A **seller** presenting a minimum price within a specified period wins the bid, and information is sent to the registered **consumer**, joint **purchasers** and the winning **seller** by a joint purchase/bid matching means 16. G06F-017/60

AB- PROBLEM TO BE SOLVED: To provide a recycle **shop** system using the

Internet capable of selling and buying articles for recycle at a nearly reasonable price to an offerer and a **purchaser** by automatically lowering the sales price step by step within the preset range with the lapse of time. SOLUTION: An order receiving processing system 12 makes an order receiver server receive a request from a member to sell an unnecessary article, and records the content of a commodity and a sales **initial price** offered by the member. A price processing system 13 computes the unfixed sales price to be lowered per the predetermined period on the basis of the sales **initial price**. A selling and purchase processing system 14 displays the content of the commodity with a sales **initial price** and the unfixed sales price. An accounting processing system 15 performs the accounting of the sales charges between the **purchaser** and a store **provider** and between the store **provider** and a commodity offering member. A delivery processing system 16 sends the commodity to the **purchaser**. The **purchaser** can purchase the commodity while waiting till the sales price is lowered to a reasonable price.
